

Descriptive vs. Inferential Statistics: A Quick Comparison

Feature	Descriptive Statistics	Inferential Statistics
Primary Goal	To summarize, organize, and describe the main features of a dataset you have.	To make predictions, inferences, or generalizations about a larger population based on a sample.
Data Focus	The specific dataset you are currently working with (the sample itself).	Using a sample to draw conclusions about a larger, unobserved population.
Output	Summary numbers (mean, median, mode, range, standard deviation), charts (histograms, bar charts, pie charts), frequency tables.	Hypothesis test results (p-values, significance), confidence intervals, regression models, probability statements.
Example Question	"What is the average age of the students in this specific class?"	"Based on this class, what can we say about the likely average age of all students in the entire school?"
Certainty	Describes known data, so conclusions are about that data.	Conclusions involve probability and are not 100% certain; there's always a chance of error.
Scope	Limited to the data collected.	Extends beyond the data collected to a broader context.
