Descriptive Geometry Part 1 Lines Plan:

A treatise on elementary and advanced descriptive geometry William Schofield Binns, 1887 Engineering Descriptive Geometry and Drawing Frank William Bartlett, Theodore Woolsey Johnson, 1919 **Note-book on Practical Solid Or Descriptive Geometry** Joseph Haythorne Edgar, G. S. Pritchard, 1871 *Note-book on practical, solid, or descriptive geometry, by J. H. Edgar and G. S. Pritchard* Joseph Haythorne Edgar, 1871 **Descriptive Geometry for Students in Engineering Science and Architecture** Henry Fry Armstrong, 1930 *The Construction of Drawings and Movies* Thomas Forget, 2012-08-21

The architectural imagery that you create is most effective when it examines your project in an abstract manner. Most students and practitioners understand linear perspective and cinema to be examples of architectural presentation tools. This book asks you to consider drawings and movies to be analytical tools that give you the capacity to engage all phases of the design process from parti to presentation. The ways in which spaces relate to each other and how materials connect to each other in your projects are as important as your building's appearance. As digital tools increasingly allow you to simulate the experience of built and unbuilt environments, it is essential that you scrutinize the nature of architectural imagery and resist the lure of virtual reality. Though pure simulation may be appropriate for your clients, your design process requires abstraction and analysis. Author Thomas Forget demonstrates how to construct analytical drawings and movies that challenge the alleged realism of linear perspective and cinema. These demonstrations expose you to underlying principles that will allow you to understand the broader implications of these methods. In addition, historical surveys of drawings and movies provide you with insight into how architects and architectural historians have understood the role of linear perspective and cinema in their fields. Finally, examples of drawing and moviemaking strategies illustrate how you can apply the lessons of the book to precedent analyses and design projects.

The Tyranny of the Straight Line

Min-Kyung Lee, 2024-04-02

A revolutionary study of nineteenth-century Parisian cartography and its role in shaping a modern conception of space. Maps are rarely given the same attention as other print media or art forms in urban history. Author Min Kyung Lee shows their rich potential in this lavishly illustrated study which brings together maps and other archival materials along with drawings and paintings. She works across disciplines to examine mapping practices in the development of nineteenth-century Paris and the transformative role that urban mapping had on the city's modernization. Lee investigates Paris's formation as a modern city, ultimately framing the practice of cartography as a catalyst for the emergence of new spatial and compositional theories. Beginning with an examination of the emblematic urban plan that Napoleon III gave to the prefect of the Seine, Georges Eugène Haussmann in 1853, Lee explores the significance of the map itself, the means of its production through surveying, the methods of its use and reception by architects, engineers, and administrators, and its place in the visual culture of Paris's modernization. At the heart of this exploration is a focus on orthography in architecture and the new quality of exactitude in modern mapping practices. The precise grid structure of orthographic maps and plans evinced a

sense of objectivity yet it was not without political context and social consequences as Lee demonstrates throughout
