Product designers work to optimize the user experience in the solutions they make for the clients. In order for them to be able to better differentiate between design options and prototypes, they can call for help the parameters whose assessment can lead them to the overall rating of their design and thus facilitate the decision which design has the upper hand compared to the alternatives.

**A Tool for Design Decision Making** Shady Attia,2012-05 This thesis investigates the use of building performance simulation tools as a method of informing the design decision of Net Zero Energy Buildings NZEBs Design Decisions under Uncertainty with Limited Information Efstratios Nikolaidis,Zissimos P. Mourelatos,Vijitashwa Pandey,2011-02-18 Today s business environment involves design decisions with significant uncertainty To succeed decision makers should replace deterministic methods with a risk based approach that accounts for the decision maker s risk tolerance In many problems it is impractical to collect data because rare or one time events are involved Therefore we need a Proceedings of the International Conference on Smart and Sustainable Built Environment (SASBE 2024) Ali GhaffarianHoseini,Amirhosein Ghaffarianhoseini,Farzad Rahimian,Mahesh Babu Purushothaman,2025-04-19 This book presents peer reviewed articles from the International Conference of Sustainable Development and Smart Built Environments SDSBE2024 held from 6-8Nov at Auckland New Zealand It encapsulates cutting edge research in Sustainable Development and Smart Built Environments featuring global scholars Encompassing diverse themes the book explores sustainable urban development governance and policy emphasizing urban greening and climate resilience It delves into innovative approaches for sustainable transport intelligent infrastructure and community well being The integration of Data Science AI and IoT for optimizing built environments is a focal point alongside advancements in digital twins and OpenBIM Social aspects including equity and indigenous perspectives are explored along with health considerations in urban settings The proceedings serve as a comprehensive resource reflecting the multifaceted advancements driving sustainable and smart urban futures **Quality of Software Architectures Models and Architectures** Steffen Becker,Frantisek Plasil,Ralf H. Reussner,2008-10-10 Models are used in all kinds of engineering disciplines to abstract from the various details of the modelled entity in order to focus on a specific aspect Like a blueprint in civil engineering a software architecture provides an abstraction from the full software system s complexity It allows software designers to get an overview on the system under development and to analyze its properties In this sense models are the foundation needed for software development to become a true engineering discipline Especially when reasoning on a software system s extra functional properties its software architecture carries the necessary information for early design time analyses These analyses take the software architecture as input and can be used to direct the design process by allowing a systematic evaluation of different design alternatives For example they can be used to cancel out decisions which would lead to architecture signs whose implementation would not comply with extra functional requirements like performance or reliability constraints Besides such quality attributes directly visible to the end user internal quality attributes e.g maintainability also highly depend on the system s architecture In addition to the above mentioned technical aspects of software architecture models non technical aspects especially project management related activities require an explicit software architecture model The models are used

as input for cost estimations, time deadline and resource planning for the development teams. They serve the project management activities of planning, executing and controlling, which are necessary to deliver high quality software systems in time and within the budget.

Talking to people about your designs might seem like a basic skill but it can be difficult to do well. In many cases, how you communicate with stakeholders, clients and other non-designers may be more important than the designs themselves. This practical guide focuses on principles, tactics and actionable methods for presenting your designs. Whether you design apps, websites or products, you'll learn how to get support from people who have influence over the project with the goal of creating the best user experience. Walk through the process of preparing and presenting your designs. Understand stakeholder perspectives and learn how to empathize with them. Cultivate both implicit and explicit listening skills. Learn tactics and strategies for expressing the most effective response to feedback. Create the right documentation for your decisions to avoid repeated conversations. Learn why following through is just as important as the meeting itself.
