Design Guidelines for Surface Mount Technology John Traister,2012-12-02 Design Guidelines for Surface Mount Technology covers the basics and the mechanics of surface mounted design technology Surface mount technology SMT embodies an automated circuit assembly process using a generation of electronic components called surface mounted devices SMDs Organized into eight chapters the book discusses the component selection space planning materials and processes and total concept needed to ensure a manufacturable design The opening chapters of the book examine the significant requirements and variables affecting SMT and SMDs The book then deals with the substrate materials specifications including fabrication and material planning assembly design rules layout guidelines package outlines and bar code labeling The next chapters describe the manufacturing and assembly processes in SMDs and process proven footprint patterns for each of the component types used as well as guidelines for creating a suitable pattern on future products Other chapters discuss the component spacing requirements for SMT and the generation of footprint patterns for passive and active components of SMDs The concluding chapter describes the design criteria for maximizing machine insertion of leaded electronic components into printed circuit boards PCBs These criteria aid the PCB designer by detailing the considerations and some of the trade offs that will provide reliable insertion in a production environment Supplementary texts on surface mount equipment supplies and services are also provided Design engineers and researchers will find this book invaluable

Harper,1999-11 *Handbook of Surface Mount Technology* Stephen W. Hinch,1988 **Handbook of Fine Pitch Surface Mount Technology** John H. Lau,1994 Surface mount technology SMT is a mature technology SMT allows placement of more surface mount components SMC into smaller and tighter printed circuit board PCB areas This increased density means increased

performance and power in smaller packaging systems and allows manufacturing of smaller and higher performance products at lower cost. The advance of integrated circuit IC technology and the requirements of high density for high speed circuitry is driving the design of SMC to higher pin count and smaller package size. In general the higher pin count and smaller package size are accomplished by reducing the bond pad size and spacing pitch on the chip level and the lead pin solder dimensions and pitch on the chip carrier module level. The last few years have witnessed an explosive growth in the research and development efforts devoted to FPT as a direct result of the rapid growth of SMT and miniaturization. Some examples are hand held lightweight video recorders that can take sharp pictures, hand held lightweight devices that can track the worldwide package movements and portable computers with tiny yet powerful microprocessors and large memory capability that can fit into a briefcase or into the palm of your hand.
