Understanding Context In Designing ,2005 Everything around us that is not a simple untouched piece of nature has been designed by someone Human society has found a great refuge in these designed objects or the artefacts and thus has adapted vociferously to their inclusion into everyday life From the early conception as art and then lately as scientific activity now during the last few decades designing has been understood as a fundamental aspect of human life This understanding

has become a motivating force in the last four decades for design research community Remarkable theories methods models and approaches for designing have been propounded during this period by various active design researchers Yet a comprehensive design theory remains largely an elusive dream and usage of proposed methods in practice unimpressive The dominant paradigms in design theory though rich in description seem to lack interconnection The thesis explores and questions the very foundations on which design theories have been built Theoretical contemplation over designing is sought through asking why question which brings in context to the forefront Thus understanding context in designing is the central theme to this dissertation Incidentally it is the context that holds key to the enhanced usage of design methods in practice The thesis presents a basis to thaw the development of design theory and provides a pragmatic approach to augment usage of design methods in practice These objectives have been achieved through the approach outlined below An extensive discussion on the notion of context is presented underpinned by the detailed survey of definitions and world views held in by various domains of studies in regard to context The salient characteristics of context identified through this discussion have been used to articulate a concise definition of context A comprehensive dialogue supplemented by the literature in design incorporating dyv of design designing artifacts and context has been put f

Metadesigning Designing in the Anthropocene John Wood, 2022-06-08. Long-sighted, radical, and provocative, this book offers a foundational framework of concepts, principles, and methods, exemplified with selected tools to enable metadesigners to manage and reinvent their practices. The book reminds readers that designers are, albeit unwittingly, helping to shape the Anthropocene. Despite their willingness to deliver greener products and services, designers find themselves part of an industry that has become the go-to catalyst for dividends and profit. If our species is to achieve the rehabilitation and metamorphosis we may need to design at the level of paradigms, genres, lifestyles, and currencies. This would mean making design more integrated, comprehensive, adaptive, transdisciplinary, self-reflexive, and relational. The book therefore advocates a shift of emphasis from designing sustainable products, services, and systems towards cultivating synergies that will induce regenerative lifestyles. The book will be of interest to managers, designers, scholars, and educators from a wide range of backgrounds, including design research, design history, design studies, and environmental studies.
