**Technology and the Built Environment** Jiawen Han, Davide Lombardi, Alessandro Cece, 2025-05-25 This open access book will be a compilation of selected papers from the 2nd International Conference on Architecture Across Boundaries AAB2024. The work focuses on novel integration of technology into the built environment in the areas of space syntax, digital fabrication, computational design, professional models, eco system and urban morphology domains. The content makes valuable contributions to academic researchers and educators in the university and practitioners in the industry who have been working in or with a particular awareness of the different types of boundaries including technological, cultural and physical boundaries in the research on built environments. This book will work as a good reference for academics and professionals conducting interdisciplinary research in an effort to understand and achieve a better hybrid environment. [The Architecture Annual 2006-2007](#). Delft University of Technology, 2008. The themes of this Architecture Annual focuses on how the materials, design, construction and running of a building can affect the environment.

**Digital Transformation of the Design, Construction and Management Processes of the Built Environment** Bruno Daniotti, Marco Gianinetto, Stefano Della Torre, 2019-12-30 This open access book focuses on the development of methods, interoperable and integrated ICT tools and survey techniques for optimal management of the building process. The construction sector is facing an increasing demand for major innovations in terms of digital dematerialization and technologies such as the Internet of Things, big data, advanced manufacturing, robotics, 3D printing, blockchain technologies and artificial intelligence. The demand for simplification and transparency in information management and for the rationalization and optimization of very fragmented and splintered processes is a key driver for digitization. The book describes the contribution of the ABC Department of the Polytechnic University of Milan (Politecnico di Milano) to R D activities regarding methods and ICT tools for the interoperable management of the different phases of the building process, including design, construction and management. Informative case studies complement the theoretical discussion. The book will be of interest to all stakeholders in the building process: owners, designers, constructors and facility managers as well as the research sector.
