**Design Thinking** Hasso Plattner, Christoph Meinel, Larry Leifer, 2010-12-13

Everybody loves an innovation an idea that sells. But how do we arrive at such ideas that sell. And is it possible to learn how to become an innovator. Over the years Design Thinking a program originally developed in the engineering department of Stanford University and offered by the two D schools at the Hasso Plattner Institutes in Stanford and in Potsdam has proved to be really successful in educating innovators. It blends an end user focus with multidisciplinary collaboration and iterative improvement to produce innovative products systems and services. Design Thinking creates a vibrant interactive environment that promotes learning through rapid conceptual prototyping. In 2008 the HPI Stanford Design Thinking Research Program was initiated a venture that encourages multidisciplinary teams to investigate various phenomena of innovation in its technical business and human aspects. The researchers are guided by two general questions 1 What are people really thinking and doing when they are engaged in creative design innovation. How can new frameworks tools systems and methods augment capture and reuse successful practices 2 What is the impact on technology business and human performance when design thinking is practiced. How do the tools systems and methods really work to get the innovation you want when you want it. How do they fail. In this book the researchers take a system s view that begins with a demand for deep evidence based understanding of design thinking phenomena. They continue with an exploration of tools which can help improve the adaptive expertise needed for design thinking. The final part of the book concerns design thinking in information technology and its relevance for business process modeling and agile software development i e real world creation and deployment of products services and enterprise systems.
