Desires Child

Karen Bartsch, Henry M. Wellman

Desires Child:

Children Talk About the Mind Karen Bartsch, Henry M. Wellman, 1995-01-26 What exactly do children understand about the mind And when does that understanding first emerge In this groundbreaking book Karen Bartsch and Henry Wellman answer these questions and much more by taking a probing look at what children themselves have to tell us about their evolving conceptions of people and their mental lives By examining more than 200 000 everyday conversations sampled from ten children between the ages of two and five years the authors advance a comprehensive naive theory of mind that incorporates both early desire and belief desire theories to trace childhood development through its several stages Throughout the book offers a splendidly written account of extensive original findings and critical new insights that will be eagerly read by students and researchers in developmental psychology cognitive psychology philosophy and psycholinguistics

theoretically as well as empirically Using data from the Generations and Gender Survey the empirical section builds upon a comparison of Turkish migrants in Germany and the Turkish minority in Bulgaria Building upon cluster analyses six clusters within Germany as well as five clusters in Bulgaria are developed to account for heterogeneity of groups Comparing these clusters in terms of assimilation and fertility intentions it becomes clear that the Turkish minority does not differ in their fertility intentions from the majority For Germany Turkish migrants differ from German natives regarding their fertility intentions but differences are explained by assimilation especially structural characteristics When comparing migrant and minority differences in fertility exist and are accounted for by cultural dissimilarity
