**Artificial Intelligence in Design '91** J. S. Gero, 2014-05-23 Artificial Intelligence in Design 91 is a collection of 47 papers from the First International Conference on Artificial Intelligence in Design held at Edinburgh in June 1991 The papers in this book are grouped into 13 headings starting with a background of AI design systems and to which extent AI that results from being used as planning tool be applied to quality oriented design processes in architecture A constraint driven approach to object oriented design is also shown on real world objects The use of CADSYN in the structural design of buildings is examined along with design dependent knowledge and design independent knowledge

Discussions on empowering designers with integrated design environments are given whereby design objects may be retrieved from catalogues without requiring users to form queries Mention is given to automated adjustment of parameter values frequently used in computer routine applications The book also introduces the Computer Aided Design CAD as applied to architecture Design representation using data models non monotonic reasoning in design and the cognitive aspects of design using empirical studies are discussed Topics of the industrial applications of AI in design such as the needed steps to develop a successful AI based tool and a review of the Castlemain Project and telecommunication distribution networks follow This book is suitable for programmers computer science students and architects and engineers who use computers in their line of work

**Information Management for Engineering Design** Randy H. Katz, 2012-12-06 Computer aided design systems have become a big business Advances in technology have made it commercially feasible to place a powerful engineering workstation on every designer's desk A major selling point for these workstations is the computer aided design software they provide rather than the actual hardware The trade magazines are full of advertisements promising full menu design systems complete with an integrated database preferably relational What does it all mean This book focuses on the critical issues of managing the information about a large design project While undeniably one of the most important areas of CAD it is also one of the least understood Merely glueing a database system to a set of existing tools is not a solution Several additional system components must be built to create a true design management system These are described in this book The book has been written from the viewpoint of how and when to apply database technology to the problems encountered by builders of computer aided design systems Design systems provide an excellent environment for discovering how far we can generalize the existing database concepts for non commercial applications This has emerged as a major new challenge for database system research We have attempted to avoid a database egocentric view by pointing out where existing database technology is inappropriate for design systems at least given the current state of the database art Acknowledgements
