**Making Design Theory** Johan Redstrom, 2017-09-01 A new

approach to theory development for practice driven research proposing that theory is something made in and through design. Tendencies toward academization of traditionally practice based fields have forced design to articulate itself as an academic discipline in theoretical terms. In this book Johan Redström offers a new approach to theory development in design research one that is driven by practice experimentation and making. Redström does not theorize from the outside but explores the idea that just as design research engages in the making of many different kinds of things theory might well be one of those things it is making. Redström proposes that we consider theory not as stable and constant but as something unfolding something acted as much as articulated inherently fluid and transitional. Redström describes three ways in which theory in particular formulating basic definitions is made through design the use of combinations of fluid terms to articulate issues the definition of more complex concepts through practice and combining sets of definitions made through design into programs. These are the building blocks for creating conceptual structures to support design. Design seems to thrive on the complexities arising from dichotomies form and function freedom and method art and science. With his idea of transitional theory Redström departs from the traditional academic imperative to pick a side theory or practice art or science. Doing so he opens up something like a design space for theory development within design research.

Architecture Through Being Human Philip D. Plowright, 2019-11-26 Architecture can seem complicated mysterious or even ill defined especially to a student being introduced to architectural ideas for the first time One way to approach architecture is simply as the design of human environments When we consider architecture in this way there is a good place to start ourselves Our engagement in our environment has shaped the way we think which we in turn use to then shape that environment It is from this foundation that we produce meaning make sense of our surroundings structure relationships and even frame more complex and abstract ideas This is the start of architectural design Making Architecture Through Being Human is a reference book that presents 51 concepts notions ideas and actions that are fundamental to human thinking and how we interpret the environment around us The book focuses on the application of these ideas by architectural designers to produce meaningful spaces that make sense to people Each idea is isolated for clarity in the manner of a dictionary with short and concise definitions examples and illustrations They are organized in five sections of increasing complexity or changing focus While many of the entries might be familiar to the reader they are presented here as instances of a larger system of human thinking rather than simply graphic or formal principles The cognitive approach to these design ideas allows a designer to understand the greater context and application when aligned with their own purpose or intentions
