**Abstract**  
Competition models in population biology are reviewed, with emphasis on the Lotka-Volterra model and its extensions. The models are shown to be a special case of a more general class of models, and the implications of this for the interpretation of the models are discussed.

**Introduction**

The Lotka-Volterra model of competition is one of the most widely used models in population biology. It is a simple model, but it has been used to describe a wide variety of biological systems, from the competition between two species of fish to the competition between two species of plants.

**1.1. The Lotka-Volterra model**

The Lotka-Volterra model is a system of two ordinary differential equations. The first equation describes the growth of the first species, and the second equation describes the growth of the second species. The equations are
