*Competition Policy Analysis* Kai Hüscherlath, 2008-09-08 Competition policy is an integral and prominent part of economic policy making in the European Union The EU Treaty prescribes its member states to conduct economic policy in accordance with the principle of an open market economy with free competition More precisely the goal of EU competition policy is to defend and develop effective competition in the common market European Commission 2000 7 Under its Commissioners van Miert Monti and most recently Kroes the EU Commission has stepped up its effort to pursue and achieve the aforementioned goal A number of so called hard core cartels such as the notorious vitamin cartel led by Roche have been detected tried in violation of Art 81 of the Maastricht Accord and punished with severe fines Also Microsoft was hit hard by the strong hand of the Commission having been severely fined for exploiting a dominant market position Economic analysis has been playing an increasingly significant role in the Commission's examination of competition law cases This holds true in particular for merger control Here however the Commission has had to accept some poignant defeats in court such as the Court's reversals of Airtours First Choice or GE Honeywell Among other things the European Court of Justice found the economic analysis as conducted by the EU's Directorate General for Competition to be flawed and the conclusions drawn not to be convincing These rejections by the courts have stirred up the scholarly debate on the conceptual foundations of European competition policy

*Competition Policy* Massimo Motta, 2004-01-12 This is the first book to provide a systematic treatment of the economics of antitrust or competition policy in a global context It draws on the literature of industrial organisation and on original analyses to deal with such important issues as cartels joint ventures mergers vertical contracts predatory pricing exclusionary practices and price discrimination and to formulate policy implications on these issues The interaction between theory and practice is one of the main features of the book which contains frequent references to competition policy cases and a few fully developed case studies The treatment is written to appeal to practitioners and students to lawyers and economists It is not only a textbook in economics for first year graduate or advanced undergraduate courses but also a book for all those who wish to understand competition issues in a clear and rigorous way Exercises and some solved problems are provided *Competition Policy for Small Market Economies* Michal S. Gal, 2003-03-15 Accordingly applying the same competition policy to all economies alike may be contrary to its goals *Competition Policy* Emmanuel Combe, 2021-11-22 *Competition Policy An Empirical and Economic Approach* Emmanuel Combe It is a truism of competition that paradoxically those who were responsible for yesterday's innovations and productivity become obstacles to future growth This is why competition law has been assigned such an important role in modern countries to detect and sanction anticompetitive practices that prevent the entry of new efficient competitors This utterly original book which thoroughly explains competition policy using economic analyses of European and U S antitrust cases illuminates the complex but crucial back and forth

between economic theory and competition law practice Covering the full range of competition policy from antitrust cartels abuse of dominant position to merger control the book not only offers a general view of competition policy in Europe and the United States but also clearly explains the economic underpinnings that guide it thus illustrating how principles are applied in practice Issues and topics include the following economic approach of antitrust sanctions role of criminal sanctions and private actions factors favoring cartel formation and stability role of leniency policies vertical restraints in the age of e-commerce economic assessment of R detecting and sanctioning predatory pricing exploitative and exclusionary abuses and impact of a horizontal vertical and conglomerate mergers on competition All the major fields of competition policy are clearly explained with many illustrative examples from case law There is also a chapter presenting an overview of competition policies around the world as well as the legal and institutional framework within which they operate At a time of increasing public concern regarding high industrial concentration especially in the digital sector the question of regulating competition is returning to the forefront Given that the concepts and tools of economic analysis are widely used by competition authorities this book gives lawyers a clear understanding of the objectives and instruments of competition policy It will thus enable corporate counsel academics and policymakers to apply or formulate competition law with increased precision in their day to day work

Competition Policy and the Control of Buyer Power Peter C. Carstensen, 2017-09-29 This book provides a comprehensive overview of the economic and competition policy issues that buyer power creates Drawing on economic analysis and cases from around the world it explains why conventional seller side standards and analyses do not provide an adequate framework for responding to the problems that buyer power can create Based on evidence that abuse of buyer power is a serious problem for the competitive process the book evaluates the potential for competition law to deal directly with the problems of abuse either through conventional competition law or special rules aimed at abusive conduct The author also examines controls over buying groups and mergers as potentially more useful responses to risks created by undue buyer power

*Report on Competition Policy* Commission of the European Communities, 1999

Report on Competition Policy, 1996 Commission of the European Communities, European Commission, 1997 The Report on Competition Policy is published annually by the European Commission in response to the request of the European Parliament made by a Resolution of 7 June 1971 This Report which is published in conjunction with the General Report on the Activities of the European Union

is designed to give a general view of the competition policy followed during the past year In 1996 as a result of the globalization of trade and the internationalization of economic phenomena there continued to be a considerable need for adjustment of the structures of the European economy In a rapidly changing world environment characterized by four main factors the speeding up of technical and scientific progress population growth in the developing countries the increase in the production of goods and services and the intensification of trade in goods and of capital movements the policy of the European Union and more particularly Community competition policy seeks to promote the indispensable adaptation of the Community economy to this new situation Globalization is in many respects an opportunity to be seized by those economies which have the means to do so The liberalization of trade both worldwide and within the single market is a mainspring of growth that will benefit the European economy European businesses and European consumers For all that globalization is also sometimes seen as a threat by European citizens faced with a society which they perceive as being more complex the more global it becomes less safe the more prosperous it grows and more fragile the more open it is These concerns are understandable They are legitimate They must be accommodated by government policies and especially by Community policy They reflect the mounting uncertainties for both structures and individuals that stem from the need to adapt to a rapidly changing world
