*The Comparative Development of Adaptive Skills* Eugene S. Gollin, 2018-02-19 Originally published in 1985 the aim of this book was to examine the development of adaptive skills in a comparative context Comparative explorations have evolutionary implications Thus it is inevitable that the contributors to this volume all of whom come to the study of development with a comparative perspective manifest concern with the relationships between ontogeny and phylogeny In this volume both field and laboratory approaches are presented It is quite clear that the laboratory studies are increasingly informed by ecological considerations that derive from field excursions It is also the case that laboratory findings are becoming an essential source in directing field inquiries The problems explored are theoretically rich and methodically significant and the comparative scope of the contributions range widely among vertebrate species

**Developmental Psychobiology and Behavioral Ecology** Elliott M. Blass, 2012-12-06 The previous volume in this series Blass 1986 focused on the interface between developmental psychobiology and developmental neurobiology The volume emphasized that an understanding of central nervous system development and function can be obtained only with reference to the behaviors that it manages and it emphasized how those behaviors in turn shape central development The present volume explores another natural interface of developmental psychobiology behavioral ecology It documents the progress made by developmental psychobiologists since the mid 1970s in identifying capacities of learning and conditioning in birds and mammals during the very moments following birth indeed during the antenatal period These breakthroughs in a field that had previously lain dormant reflect the need to meet the infant where it is in order for behavior to emerge Accordingly studies have been conducted at nest temperature infants have been rewarded by opportunities to huddle suckle or obtain milk behaviors that are normally engaged in the nest In addition there was rejection of the excessive deprivation extreme handling and traumatic manipulation studies of the 1950s and 1960s that yielded information on how animals could respond to trauma but did not reveal mechanisms of normal development In their place has arisen a series of analyses of how naturally occurring stimuli and situations gain control over behavior and how specifiable experiences impose limitations on subsequent development Constraints were identified on the range of interactions that remained available to developing animals as a result of particular events

*Evolutionary Biology* Max Hecht, 2012-12-06 *Evolutionary Biology* of which this is the nineteenth volume continues to offer its readers a wide range of original articles reviews and commentaries on evolution in the broadest sense of that term The topics of the reviews range from anthropology and behavior to molecular biology and systematics In recent volumes a broad spectrum of articles have appeared on such subjects as natural selection among replicating molecules in vitro mate recognition and the reproductive behavior in *Drosophila* evolution of the monocotyledons species selection and the communication network made possible among even distantly related genera of bacteria by plasmids and other transposable elements Articles such as these often too long for standard journals are the stuff of

Evolutionary Biology The editors continue to solicit manuscripts on an international scale in an effort to see that everyone of the many facets of biological evolution is covered Manuscripts should be sent to anyone of the following Max K Hecht Department of Biology Queens College of the City University of New York Flushing New York 11367 Bruce Wallace Department of Biology Virginia Polytechnic Institute and State University Blacks burg Virginia 24061 Ghillian T Prance New York Botanical Garden Bronx New York 10458
