Cities are Abnormal Elmer Theodore Peterson,2023-07-18 In this provocative and thought provoking work Peterson challenges the notion that cities are natural and normal environments for human beings He argues that cities and urbanization have been imposed on people through centuries of human history and that they have resulted in myriad social psychological and environmental problems Drawing on a wide range of interdisciplinary research and scholarship Peterson paints a vivid and unsettling picture of the human costs of urban living This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant

Cities Are Abnormal Elmer Peterson,Louis Bromfield,Jonathan Forman,Ladd Haystead,Henry Kamphoefner,S. McConahey,H. Nixon,J. Rhyne,Paul Sears,Roy Smith,Warren Thompson,Paul Vogt,2017-07-07 Cities are abnormal So say twelve leading Americans who present in this volume the case for decentralization not of the metropolis alone but of our entire economic and social life For two decades or more sociologists industrialists and medical men have been urging with increasing vigor that the big city with its congestion uneconomical pyramiding and separation from the ultimate consumer is not the goal towards which we should strive Decentralization the hold is desirable perhaps inevitable on economic grounds and as a means to a happier healthier life it can make the difference between success and failure for millions of Americans The big city has gone far beyond the requirements of the Industrial Revolution which gave the original impetus to its growth In an age of rapid transportation and communication the striving for numbers is an anachronism As things now stand it can be said that the larger cities of America have reached both literally and figuratively the crest of a vertical wave Decentralization as it is here presented is no blueprint for a future Utopia It means the development of smaller communities in the vast intervals between the great cities of the United States It looks to a more intimate connection between the production of raw materials and their manufacture and distribution a better balance between industry and agriculture and the achievement of values and stability which an urban congested industrialism has not been able to develop Today more than three quarters of our population is urban based Security for millions of people is thus bound up with urban production and an hourly wage That such security is extremely tenuous is proved by the history of the past fifty years At a time when the whole of our economic and cultural fabric is up for review the present structure of our civilization cannot but point a moral for dwellers in cities and tillers of the soil alike

Mental Abnormality and Deficiency Sidney Leavitt Pressey, Luella Cole, 1926 The authors have had two major purposes in writing this brief volume They have in the first place attempted to formulate material for a college course which should give in vigorous very direct practical fashion acquaintance with the major problems of mental health and mental disease and deficiency The writers have attempted not only to outline the primarily medical and psychiatric features of these problems of mental health but also to show their even more fundamental relations to education and to give some realization of the frequency with which matters involving mental abnormality appear in the affairs of everyday business and professional life The writers have in the second place attempted a treatment which should be of definite practical value to those interested in various special fields of work in which problems of personality and adjustment are frequently met they have had in mind particularly social service personnel management work with delinquents and those most important functionings of the school and college which involve the student s emotional and characterological development and his educational vocational and recreational guidance
