Sign Languages of the World Julie Bakken Jepsen, Goedele De Clerck, Sam Lutalo-Kiingi, William B. McGregor, 2015-10-16 Although a number of edited collections deal with either the languages of the world or the languages of particular regions or genetic families only a few cover sign languages or even include a substantial amount of information on them This handbook provides information on some 38 sign languages including basic facts about each of the languages structural aspects history and culture of the Deaf communities and history of research This information will be of interest not just to general audiences including those who are deaf but also to linguists and students of linguistics By providing information on sign languages in a manner accessible to a less specialist audience this volume fills an important gap in the literature

Representing the very best of innovative urban graphics City Signs explores the use of signs and other environmental graphics in cities towns and other public spaces As cities are forced to compete ever more fiercely with suburbs for businesses residents and tourism they are finding as private developers already know that attractive signs can direct visitors identify attractions and amenities such as parking and even spur development by presenting a more attractive friendly atmosphere Environmental graphic designers urban planners landscape architects and other design professionals are becoming increasingly involved in such programs which may cover miles of roadways with many owners and under several public and private jurisdictions Unfortunately no useful information about how to design these often daunting programs has been published Likewise even the most innovative of these projects rarely reach the pages of design books or magazines City Signs presents beautiful photographs and provides valuable information about the technical and logistical process of designing and building urban sign programs
