Decorative Patterns of the Ancient World William Matthew Flinders Petrie, 1930 The purpose of this collection is historical and any interests that it may claim by racial characters or charms of form are only by the way It stands as a first outline of an index to all the decorative imaginings of man The subject is countless and to wait for completion would bar any useful result The beginning of an arrangement of the matter will serve for sorting new material into a form in which it can be compared registered and consulted Examples are mythical animals florals rosettes religious and secular symbols more

Motifs in Art as Agents of Meaning Arthur Crucq, 2026-01-15 Departing from a metaphorical comparison by Renaissance architect Leon Battista Alberti between the underlying principles of drawing and weaving this book will show how seemingly abstract motifs in their realization already acquire the potential to refer to content This opens a new perspective on the so called distinction between abstract and representational and the extent to which various motifs in art can be regarded as representations Based on recent insights from the fields of anthropology archaeology psychology and semiotics it will furthermore become clear how the essentially abstract elements of art motifs can set in motion processes of meaning making and as such function as agents which implicitly emphasize that abstraction exactly shows how representation works

Chaos and Life Richard J. Bird, 2003-11-26 Why in a scientific age do people routinely turn to astrologers mediums cultists and every kind of irrational practitioner rather than to science to meet their spiritual needs The answer according to Richard J Bird is that science especially biology has embraced a view of life that renders meaningless the coincidences serendipities and other seemingly significant occurrences that fill people s everyday existence Evolutionary biology rests on the assumption that although events are fundamentally random some are selected because they are better adapted than others to the surrounding world This book proposes an alternative view of evolving complexity Bird argues that randomness means not disorder but infinite order Complexity arises not from many random events of natural selection although these are not unimportant but from the playing out of chaotic systems which are best described mathematically When we properly understand the complex interplay of chaos and life Bird contends we will see that many events that appear random are actually the outcome of order

Flinders Petrie Margaret S. Drower, 1995-06-01 Flinders Petrie has been called the Father of Modern Egyptology and indeed he is one of the pioneers of modern archaeological methods This fascinating biography of Petrie was first published to high acclaim in England in 1985 Margaret S Drower a student of Petrie s in the early 1930s traces his life from his boyhood when he was already a budding scholar through his stunning career in the deserts of Egypt to his death in Jerusalem at the age of eighty nine Drower combines her first hand knowledge with Petrie s own voluminous personal and professional diaries to forge a lively account of this influential and sometimes controversial figure Drower presents Petrie as he was an enthusiastic eccentric diligently plunging

into the uncharted past of ancient Egypt She tells not only of his spectacular finds including the tombs of the first Pharaohs the earliest alphabetic script a Homer manuscript and a collection of painted portraits on mummy cases but also of Petrie's important contributions to the science of modern archaeology such as orderly record keeping of the progress of a dig and the use of pottery sherds in historical dating Petrie's careful academic methods often pitted him against such rival archaeologists as Amelineau who boasted he had smashed the stone jars he could not carry away to be sold and Maspero and Naville who mangled a pyramid at El Kula they had vainly tried to break into
