The Discovery of Cosmic Voids Laird A. Thompson, 2020-12-10 The large scale structure of the Universe is dominated by vast voids with galaxies clustered in knots sheets and filaments forming a great cosmic web In this personal account of the major astronomical developments leading to this discovery we learn from Laird A Thompson a key protagonist how the first 3D maps of galaxies were created Using non mathematical language he introduces the standard model of cosmology before explaining how and why ideas about cosmic voids evolved referencing the original maps reproduced here His account tells of the competing teams of observers racing to publish their results the theorists trying to build or update their models to explain them and the subsequent large scale survey efforts that continue to the present day This is a well documented account of the birth of a major pillar of modern cosmology and a useful case study of the trials surrounding how this scientific discovery became accepted
