Affective Minds:

Affective Minds Giyoo Hatano, Naoyuki Okada, Hirohisa Tanabe, 2000 This is the first edited volume about affective minds a title reflecting our conviction that in order to understand how the human mind works we cannot ignore its affective aspects Although cognitive science as an integrated approach to studies of the mind has achieved some remarkable success by treating the mind as an information processing system and emphasizing the roles of domain specific knowledge in its operation breakthroughs to a deeper understanding of the mind's mechanisms functions and origins require us to take emotions into account What kinds of emotions are examined varies considerably among the chapters from biological software producing fear anger and other basic emotions to socioculturally shaped self related and moral emotions However each group of authors investigates particular exemplars of emotions deeply in relation with cognition How relationships between cognition and emotion are specified also varies for instance emotion may be conceptualized as a pattern of activation of cognitive components constituting the mind as modifying or modulating the cognitive system so that it can promptly process urgent matters or as enriching cognition and thus human life rather than being adaptive in terms of survival This volume as a whole constitutes a forum for scholars from a variety of disciplines in which studies of the cognition emotion relationships provide them with a vantage point to unite seemingly very different approaches Its theorization at mental representational levels is tied to neuroscience and comparative animal studies on the one hand and social and behavioral sciences on the other In addition enhanced understandings of affective minds are to serve practical purposes such as improving social organizations artificial systems and artifacts The contributors explore this challenging theme of affective minds using a variety of perspectives methods and concepts

Emotional Minds Sabrina Ebbersmeyer, 2012-07-30 The thoroughly contemporary question of the relationship between emotion and reason was debated with such complexity by the philosophers of the 17th century that their concepts remain a source of inspiration for today's research about the emotionality of the mind The analyses of the works of Descartes Spinoza Leibniz and many other thinkers collected in this volume offer new insights into the diversity and significance of philosophical reflections about emotions during the early modern era A focus is placed on affective components in learning processes and the boundaries between emotions and reason

EMERGENCE AND INTERPRETATION Ding Weixiang,2023-03-22 Mencius many assertions from virtue Being what I inherently possess to this virtue is what Heaven or Nature gives to me clearly show the basic self consciousness of virtue in pre Qin Confucianism and the confirmation that virtue originates from Heaven or Nature Then what was the reason for the Chinese Axis Age thinkers to unanimously trace the origin of human virtue back to Heaven or Nature and the mandate of Heaven Of course for them the source of human virtue is Heaven or Nature which means that they realized that human being was the limit of cognition Since in their view the problem is itself a question that transcends human cognition or that human understanding can possibly clarify both virtue itself and the source of human virtue being beyond the bounds of human knowledge Namely tracing back virtue to its source is a quest that transcends the capacity of human understanding However those who have been influenced by modern cognitive theory and who constantly explore how Confucian thought emerged as well as how it took shape cannot give a satisfying answer Therefore to trace the emergence and development of Confucianism through the perspective of the survival of agency and the foundation of the survival of agency is not only my own personal interest but also one necessary for clarifying the development of Confucianism and the legitimacy of its existence
