Astronomy Communication:

Astronomy Communication Andre Heck, C. Madsen, 2013-03-14

Astronomy has always been one of the easiest of the sciences to convey to the public. That is partly because it produces spectacular pictures that can be explained at least in part and admired partly because understanding of astronomy usually does not depend upon a knowledge of a complex classification system or esoteric terminology and partly because its extremes in distances and times challenge our imagination and philosophies. Most scientists enjoy sharing with others the discoveries made by themselves and their colleagues. The primary purpose of scientific research is to discover, to learn, and to understand. When we succeed, we enjoy sharing that understanding. Education is most pleasurable when our audience wishes to learn and we have something important to convey. A field that does not communicate effectively with the public soon loses its interest and support. Author Andre Heck explains the many different ways in which professional communication now occurs while Leslie Sage explains how such communication should be done. Astronomy done with spacecraft and large equipment is very expensive and the funds for those ultimately come from the public. The cost of astronomy prorated over the number of research astronomers is perhaps the highest in all the sciences. If astronomers do not share their results with the public, they will lose its support. However, for most astronomers, the desire to share and educate dominates over the pragmatic need to win public support. With the advent of new communication techniques—television, videos, CDs, DVDs, animation, simulations—we have new methods to communicate in addition to the conventional ones of the printed and spoken word. **Future**

Professional Communication in Astronomy II Alberto Accomazzi, 2011-05-10. The present volume gathers together the talks presented at the second colloquium on the Future Professional Communication in Astronomy (FPCA II) held at Harvard University, Cambridge, MA, on 13-14 April 2010. This meeting provided a forum for editors, publishers, scientists, librarians, and officers of learned societies to discuss the future of the field. The program included talks from leading researchers and practitioners and drew a crowd of approximately 50 attendees from 10 countries. These proceedings contain contributions from invited and contributed talks from leaders in the field touching on a number of topics. Among them: The role of disciplinary repositories such as ADS and arXiv in astronomy and the physical sciences; Current status and future of Open Access Publishing models and their impact on astronomy and astrophysics publishing; Emerging trends in scientific article publishing; semantic annotations; multimedia content links to data products hosted by astrophysics archives; Novel approaches to the evaluation of facilities and projects based on bibliometric indicators; Impact of Government mandates; Privacy laws and Intellectual Property Rights on the evolving digital publishing environment in astronomy; Communicating astronomy to the public; the experience of the International Year of Astronomy 2009.
