Atlas Of Neuromuscular Diseases:

Atlas of Neuromuscular Diseases Eva L. Feldman, Wolfgang Grisold, James W. Russell, Wolfgang N. Löscher, 2014-07-23
This atlas presents a comprehensive outline of neuromuscular diseases written by respected American and European authors. It discusses all aspects of neuromuscular disorders including cranial and spinal nerves, motor neuron diseases, nerve plexus, peripheral nerves, mono and polyneuropathies, entrapment syndromes, neuromuscular junctions, and muscle disease. Each chapter is structured into the following sections: anatomy, symptoms, signs, pathogenesis, diagnosis, and differential diagnosis, therapy, and prognosis. The diagnostic tools in neuromuscular disease are explained, and practical guidelines are offered on how to advance from symptoms to syndromes. The therapeutic options for each disease are also described. In this new edition, the structure of the chapters has been reorganized, and chapters on principles of peripheral nerves, nerve pain, nerve surgery, and rehabilitation have been added. The current trend of increased use of imaging techniques such as US and MRI in the diagnosis and follow-up of neuromuscular disorders is also reflected.

As we stated in our message in the book of abstracts for this congress, we have planned the programme over a long period with one clear objective: to present musculoskeletal medicine as an integral part of orthodox medical practice rather than as something alternative or complementary. To this end, we have based the plenary programme as far as possible on accepted epidemiological, anatomical, physiological, and pathological phenomena. Scientifically well-validated material must surely be the base upon which any viable musculoskeletal medicine practice may be built. While we have chosen the plenary programme to reflect musculoskeletal medicine as a part of orthodoxy, we realize and wish to emphasize that there is a wealth of original work that has been carried out within FIMM. For this reason, our first innovation for the congress was to invite members of the scientific advisory committee to select for a directed programme the three topics they felt were of greatest current importance. The results of this democratic procedure were the choice of the sacroiliac joint, a comparison of manual therapies, and biomechanics. This illustrates the broad direction
