

STRATIFIED REALITY

Reality consists of three domains: the real (underlying structures and mechanisms), the actual (events), and the empirical (observable experiences). This layered ontology helps explain complex social phenomena.

EPISTEMOLOGICAL RELATIVISM

Knowledge is socially produced and fallible. Critical realism acknowledges that our understanding of reality is shaped by social, cultural, and historical contexts, leading to multiple valid interpretations.

ONTOLOGICAL REALISM

Critical realism posits an objective reality exists independent of our perceptions. This foundational principle asserts that social structures and mechanisms have real effects, regardless of our awareness or understanding of them.

CAUSAL MECHANISMS

Critical realism focuses on identifying underlying causal mechanisms that generate observable events. These mechanisms operate in open systems and can be activated or suppressed by contextual factors.

CRITICAL REALISM PHILOSOPHY

Developed by **BEST DISSERTATION WRITERS**

STRUCTURE-AGENCY INTERPLAY

Critical realism explores the relationship between social structures and human agency. It recognizes that while structures influence individual actions, people can also transform these structures over time.

METHODOLOGICAL PLURALISM

Critical realism advocates for mixed methods research, combining qualitative and quantitative approaches. This allows for a more comprehensive understanding of social phenomena and their underlying mechanisms.

EXPLANATORY CRITIQUE

Critical realism aims to not only describe social reality but also explain it and critique existing social arrangements. This approach seeks to inform transformative social action and policy.
