Acute kidney injury AKI is a common diagnosis in daily clinical practice occurring in virtually all fields of medicine Critically ill patients are especially prone to the development of AKI due to frequent haemodynamic instability multiple risk factors and diagnostic and or treatment complications Severe AKI substantially prolongs the intensive care unit ICU length of stay with increased risk of death AKI is also a predisposing factor for multiple organ dysfunction syndrome and is usually a part of it For these and other reasons critical care nephrology plays an irreplaceable role in treating critically ill patients in ICUs The current trend in medicine generally not only in critical care nephrology is to gather as much scientific knowledge as possible and in medicine

everything is interrelated Further knowledge of pathophysiology and understanding the causes of illness come in an era of increasing polypharmacy and the escalating side effects of drugs The latter can cause conditions with the same clinical picture as immune system disorders viruses and bacteria Another issue is poisonings and drug intoxications which are a daily issue in ICU settings In short the aetiological spectrum of disease has expanded This book presents the basic principles in critical care nephrology and covers the epidemiology pathophysiology the most frequent syndromes poisonings and conservative or invasive treatment options The aim is to present an easily understandable overview using relevant scientific research results along with the authors own practical clinical experience from the University Hospital of Ostrava in the Czech Republic The authors believe that this textbook will be useful to physicians who have to make rapid diagnoses and decision making in daily ICU practice

La Greca,2001-01-01 In the last twenty years critical care medicine has been established as a specialty with its own therapies and procedures with significant implications for clinical nephrology regarding severe acute renal failure This typically multi

factorial condition is today predominantly seen in intensive care units. The complex knowledge and skills necessary to handle it have resulted in a field called Critical Care Nephrology where nephrologist and intensivist either work side by side or have formally acquired expertise and training in both specialties. Extracorporeal renal replacement therapies although originally used to treat end stage renal disease patients rapidly gained importance for acute patients. This has had far reaching implications for the initiation and possible role of blood purification in the management of critically ill patients widening the scope of interaction between the nephrologist and the intensivist. Experts in the field have contributed to the present book providing a comprehensive review of the different blood purification techniques relevant in the intensive care unit in the case of multiple organ failure. The resulting mix of established knowledge and recent results from both clinical trials and basic research constitutes a valuable tool for all professionals involved in the care of the critically ill patient. *The Basic Principles of Critical Care Nephrology* Nadezda Petejova, Arnost Martinek, 2018
