Crookes Revisited:

Sheffield Ruth Harman, John Minnis, Roger H. Harper, 2004-01-01 Sheffield has been synonymous with steelmaking since the eighteenth century and with cutlery for centuries before that. But while it has an extraordinary variety of industrial buildings connected to its metal trades, there is another side to what is England's least known big city. Set amidst magnificent scenery, it has some surprising survivals of its earlier history as well as handsome public, commercial, and religious buildings designed by its Victorian local architects. The leafy western suburbs that rise towards the Peak District were described by Sir John Betjeman as the finest in England. The 1950s and 60s saw the city famed for its innovative public housing, university buildings, and churches. After the decline of its manufacturing sector in the 1980s, major new venues for sport and entertainment, the prize-winning Peace Gardens and exciting new buildings such as the Millennium Galleries, Winter Garden, and Persistence Works, are visible signs of a renaissance in the city's fortunes. This is the first comprehensive architectural guide to Sheffield. It describes the buildings of the city centre and those of the inner suburbs within a two-mile radius of it. It also covers the lower Don valley, still the heart of Sheffield's steel industry, the outer suburbs to the west where those who made their fortunes from it lived in splendour, and there are excursions to some outstanding buildings on the outskirts. Major buildings including the Town Hall, the two Cathedrals, and the Winter Garden are given more detailed treatment, as are the two Universities. The central areas are the subject of walks; those further out have suggested tours by car. Illustrated throughout in colour with specially commissioned photographs and with these images augmented by historic maps, paintings, and drawings, Sheffield will enable residents to look at familiar buildings in a fresh light and encourage visitors to discover for themselves the city's enticing contrasts of industrial heritage and natural beauty. [Christmas at the Royal Institution](#) Frank A. J. L. James, 2007 Since the mid 1820s a series of lectures has been delivered each year over the Christmas period in the world-famous Faraday Lecture Theatre at The Royal Institution of Great Britain by prominent scientists addressed specifically to an audience of children. Initially made accessible in book form, the lectures have been nationally televised throughout the UK and distributed worldwide since the 1960s, making them accessible to an even larger audience. The importance of these lectures in promoting science to a broad audience is perhaps best gauged by the fact that an image of one of Faraday's lectures appeared on the Bank of England's £20 note in the 1990s. This anthology brings

together for the first time a carefully chosen selection of 11 lectures from the 1860s to the 1990s The selection includes lectures by Michael Faraday arguably the most important and influential 19th century physicist and Lawrence Bragg the youngest ever winner of the Nobel Prize Through this work readers will come to grips with the changing nature of popular science lectures over the past 140 years Sample Chapter s Introduction 7 804 KB Chapter 1 The Correlation of the Physical Forces 957 KB Chapter 2 Carbon or Charcoal Coal Gas Respiration and Its Analogy to the Burning of a Candle Conclusion 345 KB Chapter 3 The Forms of Water in Clouds and Rivers Ice and Glaciers 422 KB Chapter 4 Lessons in Electricity 781 KB Contents The Correlation of the Physical Forces M Faraday Carbon or Charcoal OCo Coal Gas OCo Respiration and Its Analogy to the Burning of a Candle OCo Conclusion M Faraday The Forms of Water in Clouds and Rivers Ice and Glaciers J Tyndall Lessons in Electricity J Tyndall Stars R S Ball RAntgen Light S P Thompson The Great Extinct Reptiles OCo Dinosaurs from the Oolites OCo The Pariasaurus and Inostransea from the Trias of North Russia and South Africa OCo Marine Reptiles E R Lankester The Atoms of Which Things Are Made W H Bragg Our Electrical Supply W L Bragg Objects and Pictures R L Gregory Gallery of Monsters I Stewart Readership Scientists with an interest in communicating science historians with an interest in the development of science communication general public interested in science

Misleading Evidence and Evidence-Led Policy Lawrence W. Sherman, 2003-09 Research evidence can and should have an important role in shaping public policy Just as much of the medical community has embraced the concept of evidence based medicine increasing numbers of social scientists and government agencies are calling for an evidence based approach to determine which social programs work and which ones don t It is an irony not lost on the social scientists writing for the September volume of *The Annals* that the first use of experimental methods in medicine to test the effects of Streptomycin on tuberculosis in the late 1940s was actually conducted by an economist But while more than one million clinical trials in medicine have been conducted since that time only about 10 000 have been conducted to evaluate whether social programs achieve their intended effects Authors of the September volume argue that this level of investment in the gold standard of research designs is insufficient for a wide range of reasons Randomized controlled trials for example are far better at controlling selection biases and chance effects than are other observational methods while econometric and statistical techniques that seek to correct for bias fall short of their promise The volume dramatically demonstrates that alternative methods generate different and often substantially wrong estimates of program effects Some research based on

nonexperimental research designs actually mislead policy makers and practitioners into supporting programs that don't work while ignoring others that do. Authors of this volume also directly address critiques of experimental designs which range from questions about their practicality to their ethics. Some of these arguments are well taken but addressable. The authors however reject other arguments against controlled tests as unfounded and damaging to social science. Policymakers will find these articles invaluable in better understanding how alternative research methods can mislead as much as enlighten. Students and researchers will be confronted with powerful arguments that question the use of nonexperimental techniques to estimate program effects. This volume throws the gauntlet down. We challenge you to pick it up. **Isis Cumulative**

Divided into three sections: Contexts, Concepts and Debates, the book sets out traditional understandings of method, examines alternative accounts and critiques that inform and at times go beyond postmethod thinking within language teaching and finally relates these issues to key practical debates and dilemmas that teachers navigate in the classrooms. Highlighting the importance of teachers' understandings of their own professional contexts, the volume uses the notion of method as a lens through which teachers and other language teaching professionals can clarify their understandings of language teaching both in terms of pedagogic practices and classroom possibilities and with regard to the development of this diverse field more generally. Throughout, readers are encouraged to develop their own thinking and practice in contextually appropriate ways supported by discussion questions and key readings that accompany each chapter, a glossary of key terms and suggestions for additional reading. This book is an indispensable resource for language teachers and other language teaching professionals as well as postgraduate and upper level undergraduate students of Applied Linguistics, Language Teacher Education and ELT/ TESOL and other language teaching programmes.
