data sets and code enable readers to reproduce all the figures and examples engage with the different methods and adapt them to their own fields of interest An accessible textbook for students and an indispensable reference for researchers this updated edition features new sections on deep learning methods hierarchical Bayes modeling and approximate Bayesian computation The chapters have been revised throughout and the astroML code has been brought completely up to date Fully revised and expanded Describes the most useful statistical and data mining methods for extracting knowledge from huge and complex astronomical data sets Features real world data sets from astronomical surveys Uses a freely available Python codebase throughout Ideal for graduate students advanced undergraduates and working astronomers

Advances in Machine Learning and Data Mining for Astronomy Michael J. Way, Jeffrey D. Scargle, Kamal M. Ali, Ashok N. Srivastava, 2012-03-29 Advances in Machine Learning and Data Mining for Astronomy documents numerous successful collaborations among computer scientists statisticians and astronomers who illustrate the application of state of the art machine learning and data mining techniques in astronomy Due to the massive amount and complexity of data in most scientific disciplines the material discussed in this text transcends traditional boundaries between various areas in the sciences and computer science The book's introductory part provides context to issues in the astronomical sciences that are also important to health social and physical sciences particularly probabilistic and statistical aspects of classification and cluster analysis The next part describes a number of astrophysics case studies that leverage a range of machine learning and data mining technologies In the last part developers of algorithms and practitioners of machine learning and data mining show how these tools and techniques are used in astronomical applications With contributions from leading astronomers and computer scientists this book is a practical guide to many of the most important developments in machine learning data mining and statistics It explores how these advances can solve current and future problems in astronomy and looks at how they could lead to the creation of entirely new algorithms within the data mining community
