**Astronomy and Astrophysics** National Research Council, Division on Engineering and Physical Sciences, Space Science Board, Task Group on Astronomy and Astrophysics, 1988-02-01 **Astrophysics and Space Science**, 1997 *Space Science in China* Wen-Rui Hu, 2022-04-18 Space science in China is one of the most active areas in modern science and China has played a dynamic and steadily increasing role in this field since the 1960s Until recently however activity in China was a mystery to the rest of the world With the commercial importance of space and the fact that space is now used as a laboratory to carry out various experiments China has recently emerged as an important international competitor Space Science in China provides a clear understanding of the latest research and progress in such wide ranging areas as the development and research in solar terrestrial science space astronomy geoscience remote sensing microgravity science and life science

**Science in NASA's Vision for Space Exploration** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Scientific Context for Space Exploration, 2005-02-01 In January 2004 President Bush announced a new space policy directed at human and robotic exploration of space The National Academies released a report at the same time that independently addressed many of the issues contained in the new policy In June the President's Commission on Implementation of United States Space Exploration Policy issued a report recommending that NASA ask the National Research Council NRC to reevaluate space science priorities to take advantage of the exploration vision Congress also directed the NRC to conduct a thorough review of the science NASA is proposing to undertake within the initiative This report provides an initial response to those requests It presents guiding principles for selecting science missions that enhance and support the exploration program The report also presents findings and recommendations to help guide NASA's space exploration strategic planning activity Separate NRC reviews will be carried out of strategic roadmaps that NASA is developing to implement the policy **Solar and Space Physics** National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee on a Decadal Strategy for Solar and Space Physics (Heliophysics), 2013-09-26 From the interior of the Sun to the upper atmosphere and near space environment of Earth and outward to a region far beyond Pluto where the Sun's influence wanes advances during the past decade in space physics and solar physics the disciplines NASA refers to as heliophysics have yielded spectacular insights into the phenomena that affect our home in space Solar and Space Physics from the National Research Council's NRC's Committee for a Decadal Strategy in Solar and Space Physics is the second NRC decadal survey in heliophysics Building on the research accomplishments realized during the past decade the report presents a program of basic and applied research for the period 2013-2022 that will improve scientific understanding of the mechanisms that drive the Sun's activity and the fundamental physical processes underlying near Earth plasma dynamics determine the physical interactions of Earth's atmospheric layers in the context of the connected Sun Earth system and enhance greatly the capability to provide

realistic and specific forecasts of Earth's space environment that will better serve the needs of society. Although the recommended program is directed primarily at NASA and the National Science Foundation for action, the report also recommends actions by other federal agencies, especially the parts of the National Oceanic and Atmospheric Administration charged with the day-to-day operational forecast of space weather. In addition to the recommendations included in this summary, related recommendations are presented in this report: **Astronomy and Astrophysics Monthly Index**, 1988

**The Space Science Decadal Surveys** National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Survey of Surveys: Lessons Learned from the Decadal Survey Process, 2015-10-28. The National Research Council has conducted 11 decadal surveys in the Earth and space sciences since 1964 and released the latest four surveys in the past 8 years. The decadal surveys are notable in their ability to sample thoroughly the research interest, aspirations, and needs of a scientific community. Through a rigorous process, a primary survey committee and thematic panels of community members construct a prioritized program of science goals and objectives and define an executable strategy for achieving them. These reports play a critical role in defining the nation's agenda in that science area for the following 10 years and often beyond. The Space Science Decadal Surveys considers the lessons learned from previous surveys and presents options for possible changes and improvements to the process, including the statement of task, advanced preparation, organization, and execution. This report discusses valuable aspects of decadal surveys that could be taken further, as well as some challenges future surveys are likely to face in searching for the richest areas of scientific endeavor, seeking community consensus of where to go next, and planning how to get there. The Space Science Decadal Surveys describes aspects in the decadal survey prioritization process, including balance in the science program and across the discipline, balance between the needs of current researchers and the development of the future workforce, and balance in mission scale: smaller competed programs versus large strategic missions. The Sun from Space Kenneth R. Lang, 2008-10-20. The First Edition of The Sun from Space completed in 1999 focused on the early accomplishments of three solar spacecraft: SOHO, Ulysses, and Yohkoh, primarily during a minimum in the Sun's 11-year cycle of magnetic activity. The comprehensive Second Edition includes the main findings of these three spacecraft over an entire activity cycle, including two minima and a maximum, and discusses the significant results of six more solar missions. Four of these—the Hinode, RHESSI, STEREO, and TRACE missions—were launched after the First Edition was either finished or nearly so, and the other two—the ACE and Wind spacecraft—extend our investigations from the Sun to its varying input to the Earth. The Second Edition does not contain simple updates or cosmetic patch-ups to the material in the First Edition; it instead contains the relevant discoveries of the past decade integrated into chapters completely rewritten for the purpose. This provides a fresh perspective to the major topics of solar enquiry, written in an enjoyable, easily understood text accessible to all readers, from the interested layperson to the student or professional. **Space Science in the Twenty-first Century: Solar and space physics**, 1988

**Space Science in the Twenty-First Century** National Research Council, Division on Engineering and Physical Sciences, Space Science Board, Report of the Study Steering Group, 1988-02-01 Space Studies Board Annual Report 2017 National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, 2018-12-19 The original charter of the Space Science Board was established in June 1958 three months before the National Aeronautics and Space Administration NASA opened its doors The Space Science Board and its successor the Space Studies Board SSB have provided expert external and independent scientific and programmatic advice to NASA on a continuous basis from NASA's inception until the present The SSB has also provided such advice to other executive branch agencies including the National Oceanic and Atmospheric Administration NOAA the National Science Foundation NSF the U S Geological Survey USGS the Department of Defense as well as to Congress Space Studies Board Annual Report 2017 covers a message from the chair of the SSB David N Spergel This report also explains the origins of the Space Science Board how the Space Studies Board functions today the SSB's collaboration with other National Academies of Sciences Engineering and Medicine units assures the quality of the SSB reports acknowledges the audience and sponsors and expresses the necessity to enhance the outreach and improve dissemination of SSB reports This report will be relevant to a full range of government audiences in civilian space research including NASA NSF NOAA USGS and the Department of Energy as well members of the SSB policy makers and researchers *Introduction to Space Science* Robert C. Haymes, 1971 **Space Studies Board Annual Report 2010** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, 2011-01-01 The Space Studies Board SSB was established in 1958 to serve as the focus of the interests and responsibilities in space research for the National Academies The SSB provides an independent authoritative forum for information and advice on all aspects of space science and applications and it serves as the focal point within the National Academies for activities on space research It oversees advisory studies and program assessments facilitates international research coordination and promotes communications on space science and science policy between the research community the federal government and the interested public The SSB also serves as the U S National Committee for the International Council for Science Committee on Space Research COSPAR This volume reviews the organization activities and reports of the SSB for the year 2010 Space Science and Technology British National Space Centre, 1989 **The Century of Space Science** J.A. Bleeker, Johannes Geiss, M. Huber, 2001 The 20th century can truly be called the Century of Space Science for it was in the 20th century that the multidisciplinary study of space science as opposed to astronomy was conceived Today as we start a new century of discovery we are able to cast our perspective back in order to chronicle how the field began review how it developed and discuss how it reached its current levels We are able to overview the historical development and to put early discoveries in context to document our current understanding and to look forward to the coming century with some degree of optimism One of the most attractive features of this young discipline is that many of the original pioneers and key

players involved are still available to describe their field Hence at this point in history we are in a unique position to gain first hand insight into the field and its development To this end *The Century of Space Science* a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century The level is academic and focuses on key discoveries how these were arrived at their scientific consequences and how these discoveries advanced the thoughts of the key players involved With over 90 world class contributors such as James Van Allen Cornelis de Jager Eugene Parker Reimar L st and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer past ESO Director General this book will be immensely useful to readers in the fields of space science astronomy and the history of science Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection The work is published in two large format volumes and contains colour images throughout It includes several appendices for example a basic chronology of the field and a complete list of every space science mission ever launched and is extensively and comprehensively indexed The scientific editorial team consists of Johan A M Bleeker of SRON The Netherlands Johannes Geiss of the International Space Science Institute Berne and Martin Huber of ESA and history consultant Arturo Russo of the University of Palermo Italy

*U.S. Astronomy and Astrophysics National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Space Studies Board, Committee on the Organization and Management of Research in Astronomy and Astrophysics, 2001-11-20* In its fiscal year 2002 budget summary document the Bush administration expressed concern based in part on the findings and conclusions of two National Research Council studies about recent trends in the federal funding of astronomy and astrophysics research The President's budget blueprint suggested that now is the time to address these concerns and directed the National Science Foundation NSF and the National Aeronautics and Space Administration NASA to establish a blue ribbon panel to

- 1 assess the organizational effectiveness of the federal research enterprise in astronomy and astrophysics
- 2 consider the pros and cons of transferring NSF's astronomy responsibilities to NASA and
- 3 suggest alternative options for addressing issues in the management and organization of astronomical and astrophysical research

NASA and NSF asked the National Research Council to carry out the rapid assessment requested by the President This report focusing on the roles of NSF and NASA provides the results of that assessment

*Intelligent Information Retrieval: The Case of Astronomy and Related Space Sciences* Andre Heck, Fionn Murtagh, 2007-08-20 Intelligent information Retrieval comprehensively surveys scientific information retrieval which is characterized by growing convergence of information expressed in varying complementary forms of data textual numerical image and graphics by the fundamental transformation which the scientific library is currently being subjected to and by computer networking which has become an essential element of the research fabric Intelligent Information Retrieval addresses enabling technologies so called wide area network resource discovery tools and the state of the art in astronomy and other sciences This work is essential reading for astronomers scientists in related disciplines and all those involved in
