

1. Case Overview

- **Title:** Groundwater to get warmer by 3 degree warmer by century's ending threatening safety

2. Background Information

- **Summary:** Groundwater is expected to warm by 2-3.5 degrees Celsius by the end of the century, potentially jeopardizing water quality, safety, and ecosystems. This warming could affect millions of people and local aquatic life, highlighting the importance of addressing groundwater impacts in climate change discussions.
- **Historical Context:** The historical context of groundwater warming relates to the broader history of climate change and its impact on natural resources. As industrialization progressed over the last two centuries, increased greenhouse gas emissions have led to global warming, affecting various aspects of the environment, including groundwater. Traditionally, climate change discussions have focused on surface temperatures, weather patterns, and water availability.

3. Legal Issues:

- **Water Quality Standards:** Only 18 out of 125 countries have temperature guidelines for drinking water, according to the World Health Organization. As groundwater temperatures rise, countries may need to establish or update regulations to ensure water safety.
- **Public Health:** Warmer groundwater can promote microbial growth, increasing the risk of waterborne diseases. Legal frameworks may need to address public health risks and enforce measures to protect water quality.
- **Environmental Protection:** Ecosystems relying on groundwater could be adversely affected. Laws protecting these ecosystems might need to be strengthened to mitigate the impact of warming groundwater.

4. Case Proceedings

- Climate change presents a choice for public policy: mitigate our contribution to it or attempt to adapt to a changing world. In its most radical form, adaptation accepts as a given fundamental changes to our environment caused by a warming climate and consequently demands similarly fundamental adaptations in our ways of life. Those adaptations could entail widespread and severe environmental impacts, complementing and enhancing the primary environmental consequences of climate change. While environmental law has, if haltingly, moderated our environmental impacts in the recent past, this Article suggests that we should not assume that its successes will be repeated in a warmer world. Climate change threatens to exacerbate some of the problems of capacity that have limited environmental law, particularly the inability to plan comprehensively to minimize environmental effects. Climate change may also undermine the public support that has been integral to the creation and sustenance of environmental law by reorienting human relationships with the natural world. The environmental changes caused by a warming climate may convert "the environment"
