Alterations Of Excitationcontraction Coupling In The Failing Human Heart:

Alterations of Excitation-Contraction Coupling in the Failing Human Heart Gerd Hasenfuss,Hanjoerg Just,2012-04-09

Alteration of excitation contraction coupling in the failing human heart was deemed an interesting subject for a dialogue between basic scientists and clinical researchers in continuation of previous Gargellen Conferences concerned with the function of the normal and failing human myocardium In 1987 basic mechanisms and clinical implications of then new insights into cardiac energetics was followed by a comprehensive review of inotropic stimulation and myocardial energetics in 1989 Here we undertook a re evaluation of the principles of inotropic stimulation and of its potential therapeutic value based on new observa tions from experiments with human myocardium In 1992 the risk due to myocardial phenotype change as a consequence of adaptation in heart failure was published Here alterations of subcellular structures and functions as a consequence of chronic heart failure summarized as phenotype change could be described as an essential characteristic of the failing human myocardium This topic was discussed in greater depth in the volume Cellular and Molecular Alterations in the Failing Human Heart considering both the sarcolemma and the phosphodiesterases as well as excitation contraction coupling and contractile proteins extracellular matrix and mitrochondrial function

Understanding the New Ischemic Syndromes Gerd Hasenfuss,1997 *Molecular Approaches to Heart Failure Therapy* Gerd Hasenfuss,2000 This book provides an approach to discussing new targets for molecular strategies in heart failure therapy On the basis of most recent data international experts in this field elaborate on the most relevant pathophysiological alterations in heart failure on a molecular level and discuss potential strategies These include technical aspects of gene transfer gene transfer approaches to treating pump failure and arrhythmias and gene transfer to prevent apoptosis Furthermore the topics myocyte transplantation and cell cycle regulation are discussed The book contains twenty one chapters including state of the art review articles as well as original papers

Biophysics of the Failing Heart R. John Solaro,Jil C. Tardiff,2013-08-13 Subjects in the monograph Biophysics of the Failing Heart include state of the art chapters considering major biophysical mechanisms for why hearts responding to acquired or inherited stressors enter into maladaptive processes eventually leading to an inability of the heart to respond efficiently to hemodynamic loads especially during exercise The chapters describe biophysical techniques that have been applied to determine the triggers for the heart failure process as well as the mechanisms for sustaining the disorders These techniques include measurements of active and passive mechanical properties and hemodynamics at levels of organization ranging from molecules to hearts beating in situ Biophysical concepts and approaches are also applied to determination of signaling and signal transduction energetics ionic currents transport processes electro chemical and chemo mechanical coupling By its emphasis on biophysical aspects of a prevalent clinical condition the monograph is unique in its perspective and focus The breadth of information in the chapters all in one place will be of value to clinicians and researchers at all levels Modern research approaches and clinical understanding of heart

failure demands integration of multiple aspects of the disorders In most cases combinations of clinician scientists and researchers author the chapters A main benefit of the book is couched in its didactic approach together with its emphasis on how biophysical concepts and techniques aid in diagnosis and development of new therapies
