Innovative Urban Wet-Weather Flow Management Systems Richard Field, James P. Heaney, Robert Pitt, 2000-06-27

The 20th century's automobile inspired land use changes brought about tremendous transformations in how stormwater moves across the modern urban landscape Streets and parking areas in the average urban family's neighborhood now exceed the amount of land devoted to living space Add parking office and commercial space and it's easy to understand how modern cities have experienced a three fold increase in impervious areas Traditional wet weather collection systems removed stormwater from urban areas as quickly as possible often transferring problems downstream Innovative Urban Wet Weather Flow Management Systems does two things It considers the physical chemical and biological characteristics of urban runoff then describes innovative methods for improving wet weather flow WWF management systems The result of extensive research Innovative Urban Wet Weather Flow Management Systems looks most at how to handle runoff in developments of the 21st century the conflicting objectives of providing drainage while decreasing stormwater pollutant discharges the impact of urban WWF on surface and groundwater such as smaller urban stream channels scoured by high peak flows

sediment transport and the toxic effects of WWF on aquatic organisms the effectiveness of WWF controls including design guidelines and source and downstream controls are an important issue Innovative Urban Wet Weather Flow Management Systems looks at how source controls like biofiltration created through simple grading may work in newly developing areas while critical source areas like an auto service facilities may need more extensive treatment strategies Focusing WWF treatment on intensively used areas such as the 20 percent of streets that handle the bulk of the traffic and under utilized parking areas is also considered Developing a more integrated water supply system collecting treating and disposing of wastewater and handling urban WWF requires innovative methods such as a neighborhood scale system that would recycle treated wastewater and storm water for lawn watering and toilet flushing or use treated roof runoff for potable purposes

Subcommittee on Highways and Transit,2002 *Managing Community Growth* Eric Kelly,2004 Despite roughly thirty years of experience with growth management programs which are basically land use planning tools most U S communities do not plan for how best to limit or manage rapid growth in fact most communities do not plan at all In the absence of planning land use boards regulators and other governing bodies simply react to initiatives from the private sector The result is predictably haphazard and does not allow communities to achieve such goals as protecting quality of life attracting certain types of businesses while discouraging others conserving wildlife or preserving open spaces and so forth In contrast planning by managing growth can help a town or city achieve any number of goals But it is a complex task This book brings the benefit of state and local experiences with growth management to researchers students and particularly practitioners who seek guidance in these matters Kelly provides a much needed context from which any community can answer the following questions Does growth management work Is it appropriate for the community and the particular problems that it is trying to address Is one type of growth management program more appropriate than another for our community Will the program in question have undesirable or desirable side effects What are the likely effects of adopting no growth management program at all This work is invaluable for the citizen volunteers who sit on land use boards including planning and zoning commissions conservation commissions and inland wetlands agencies In addition it can aid mayors city managers and city councils in interviewing and selecting candidates for town planner
