The Leader's Brain Bastiaan Heemsbergen, 2004 In his new book Dr Heemsbergen shows that the best insights into leadership can come not from what leaders are thinking but from how leaders think The author suggests a fresh approach to how leaders can think and describes the necessary processes and tools required to improve the leader's capability in volatile and complex times Leveraging extensive research findings and observations the author makes some unexpected connections between brain research and how leaders think the artistic process our knowledge of the nonconscious and leadership development Heemsbergen a psychologist university lecturer and developer of leaders has developed new powerful metaphor tools from artistic practice and brain research to help leaders probe deeply into their perceptions thoughts and emotions and uncover those things that they don't even know they don't know There is much that goes on in the mind that we're not aware of and most of what influences what leaders say and do occurs below the water line of the iceberg at the nonconscious level That's why new methods techniques and tools are required to get at what leaders don't know they know Leaders also need to develop a beginner's mind become better sensors and see things with fresh eyes Much of what leaders do in organizations is based on the idea of finding the right answer to a question Unfortunately it is often assumed there is only one right answer and we do not need to think about the topic further In real life much of what is known is in a state of flux waiting for a new bit of evidence to modify the knowledge To assist leaders in becoming more effective the author has developed methods and tools based on neuropsychology psychoanalysis and artistic practice He calls it the H SAT the Heemsbergen Sensory Awareness Tools These tools assist in uncovering the mental models that guide leadership behavior illuminating leadership blindspots and improving leadership decision making capability Heemsbergen concludes the eye ear and body have been the most important tools for the gathering of information since the dawn of time Using time tested methods of artistic practice in combination with breakthroughs in brain research opens the possibility for uncovering hidden leadership talent to deal more effectively with a complex and volatile world *Lessons Enlightenment* Elena

anxiously anticipate our breakthrough to arrive but only to find out that the path is not straight there are bumps and diversions that can only be rectified by time This is a collection of poems about the wait the hurt and eventually the alignment of our fates The game of life is all about patience and hope These poems are for all of us who have spent sleepless nights and lived mundane routine days knowing that when the clock is finally in our favor everything will finally make sense There is a time for waiting There is a time for hurting But after every detours and delays destiny persists and everything will align All we have to do is wait The Prado Museum Expansion Bridget V.
