Blendung Und Wandlung:

Blendung und Wandlung Ilse Pracht-Fitzell, 1989 **Encyclopedia of German Literature** Matthias Konzett, 2015-05-11
Designed to provide English readers of German literature the opportunity to familiarize themselves with both the established canon and newly emerging literatures that reflect the concerns of women and ethnic minorities the Encyclopedia of German Literature includes more than 500 entries on writers individual work and topics essential to an understanding of this rich literary tradition Drawing on the expertise of an international group of experts the essays in the encyclopedia reflect developments of the latest scholarship in German literature culture and history and society In addition to the essays author entries include biographies and works lists and works entries provide information about first editions selected critical editions and English language translations All entries conclude with a list of further readings *Das Wandlungskonzept in der expressionistischen Dramatik* Rania Elwardy, 2009 Die Krise zur Zeit der Moderne war komplex Zu ihren wichtigsten Aspekten gehören die Entfremdungskrise die Krise der Armut und die des Krieges Die expressionistische Dramatik hat zwischen 1910 und 1925 versucht mit dem Wandlungskonzept einen Beitrag zu ihrer Bewältigung zu leisten Das Konzept wird in dieser Arbeit anhand von elf expressionistischen Dramen dargestellt Zum Zeitpunkt der Veröffentlichung dieses Buches erfährt die Welt eine Krise die derjenigen zur Zeit des Expressionismus in vieler Hinsicht ähnelt Dies veranlasst die Autorin darüber nachzudenken ob das im Drama des Expressionismus dargestellte Denkmodell der Wandlung als taugliches Mittel zur Bewältigung auch heutiger Krisen geeignet ist Sie zieht dabei auch Erkenntnisse aus anderen Wissenschaften heran und kommt zu einem interdisziplinären Ansatz Zum Einfluss des Spektrums auf die Blendung Niedling, Matthias, 2019-05-07 In der vorliegenden Arbeit wurde der Einfluss der spektralen Verteilung von Blendquellen auf die physiologische und die psychologische Blendung untersucht Erstere wurde dabei über die Kontrastwahrnehmung operationalisiert letztere über die Bewertung der Blendung auf einer neunstufigen Skala Das Ziel der im Rahmen dieser Arbeit durchgeführten Untersuchungen war es eine physiologische Erklärung für eine erhöhte Blendempfindlichkeit bei erhöhtem Anteil kurzwelliger Strahlung im Spektrum der Blendquelle zu finden Ferner sollte geprüft werden ob eine additiv zusammengesetzte spektrale Blendempfindlichkeitskurve zur Vorhersage der Blendung durch reale breitbandige Blendreize geeignet ist Um dies zu untersuchen wurden verschiedene Probandenversuche im Labor durchgeführt Hierfür wurde ein Versuchsdesign entwickelt in welchem unter sonst konstanten Bedingungen das Spektrum einer Blendquelle frei einstellbar war Dabei wurde der Anwendungsfall einer Straßenbeleuchtungsszene nachgestellt Die Untersuchungen fanden unter mesopischen Adaptationsbedingungen statt In den Untersuchungen wurden sowohl schmalbandige als auch breitbandige Blendreize gezeigt Letztere wurden dabei in synthetische Spektren zur gezielten Stimulation retinaler Photorezeptoren und in reale Spektren unterteilt Zudem wurde überprüft ob der Pupillendurchmesser vom Spektrum der Blendquelle beeinflusst wird Die Blendungsbewertung breitbandiger Blendspektren zeigte eine signifikante Abhängigkeit von der spektralen

Verteilung der Blendquelle In Abhängigkeit der Stimulation der S Zapfen wurde eine maximale Erhöhung von 1,4 Skaleneinheiten auf der verwendeten Skala festgestellt Die Blendungsbewertung der schmalbandigen Blendreize ist trotz diesen Befund unter Berücksichtigung der Hornhautbeleuchtungsstärke Die aufgezeichnete spektrale Blendempfindlichkeitskurve eignete sich nicht zur Vorhersage der Blendungsbewertung breitbandiger Reize Für die Änderung des Pupillendurchmessers wurde keine spektrale Abhängigkeit festgestellt Die Kontrastwahrnehmung zeigte ebenfalls keine relevante Abhängigkeit vom Spektrum der Blendquelle Die Ergebnisse wurden für variierende Umfeldspektren bestätigt Dabei zeigte sich dass für Blendquellen außerhalb der Fovea anscheinend mesopische Leuchtdichten zur Beschreibung des Adaptationsniveaus verwendet werden sollten Die Befunde dieser Arbeit wurden in einen bestehenden Ansatz zur Bewertung der psychologischen Blendung integriert This thesis deals with the influence of glare sources spectral power distribution SPD on disability and discomfort glare While disability glare was measured by contrast threshold discomfort glare was operationalized by the glare rating on a nine point scale The aim of the studies in this work was to find a physiological explanation for increased glare perception with an increasing amount of short wavelength radiance Furthermore it was investigated whether an additive composed spectral glare sensitivity of narrow band stimuli is applicable for the prediction on discomfort glare of broadband stimuli To investigate this issue different investigations were carried out under laboratory conditions For this purpose a setup with spectral free adjustable glare source was developed The investigations were performed under street lighting and therefore under mesopic conditions Broadband and narrow band stimuli were presented to the subjects The broadband stimuli were separated in synthetic spectra for the specific stimulation of different photoreceptors and realistic spectra and synthetic spectra to confirm the results Moreover the influence of the glare sources SPD on pupil diameter was investigated The glare sources SPD of broadband stimuli showed a significant influence on glare evaluation Depending on the stimulation of the S cones glare rating increased up to 1,4 scale points on the used scale The glare rating of the narrow band stimuli confirms this result in consideration of the illuminance at the subject's eye The spectral glare sensitivity curve figured out in this research was not applicable to predict discomfort glare of broadband stimuli The glare sources SPD showed no influence on pupil diameter Also the contrast threshold was not affected by the SPD The results were confirmed for different spectral surrounding conditions In order to figure this out it was evaluated that for glare sources presented outside the fovea mesopic luminances should be apparently used as adaptation luminance The results of this work were integrated in an existing glare evaluation model
