Cyclic Galois Extensions Of Commutative Rings Lecture Notes In Mathematics 1534:

Cyclic Galois Extensions of Commutative Rings Cornelius Greither, 1992 The structure theory of abelian extensions of commutative rings is a subject where commutative algebra and algebraic number theory overlap This exposition is aimed at readers with some background in either of these two fields Emphasis is given to the notion of a normal basis which allows one to view in a well known conjecture in number theory Leopoldt's conjecture from a new angle Methods to construct certain extensions quite explicitly are also described at length Brauer Groups, Hopf Algebras and Galois Theory Stefaan Caenepeel, 2002-03-31 This volume is devoted to the Brauer group of a commutative ring and related invariants Part I presents a new self contained exposition of the Brauer group of a commutative ring Included is a systematic development of the theory of Grothendieck topologies and étale cohomology and discussion of topics such as Gabber's theorem and the theory of Taylor's big Brauer group of algebras without a unit Part II presents a systematic development of the Galois theory of Hopf algebras with special emphasis on the group of Galois objects of a cocommutative Hopf algebra The development of the theory is carried out in such a way that the connection to the theory of the Brauer group in Part I is made clear Recent developments are considered and examples are included The Brauer Long group of a Hopf algebra over a commutative ring is discussed in Part III This provides a link between the first two parts of the volume and is the first time this topic has been discussed in a monograph Audience Researchers whose work involves group theory The first two parts in particular can be recommended for supplementary graduate course use **Introduction to Cyclotomic Fields** Lawrence C.

Washington, 2012-12-06 Introduction to Cyclotomic Fields is a carefully written exposition of a central area of number theory that can be used as a second course in algebraic number theory Starting at an elementary level the volume covers p -adic L -functions class numbers cyclotomic units Fermat's Last Theorem and Iwasawa's theory of \mathbb{Z}_p -extensions leading the reader to an understanding of modern research literature Many exercises are included The second edition includes a new chapter on the work of Thaine Kolyvagin and Rubin including a proof of the Main Conjecture There is also a chapter giving other recent developments including primality testing via Jacobi sums and Sinnott's proof of the vanishing of Iwasawa's f -invariant

Rings, Extensions, and Cohomology Andy R. Magid, 2020-09-10 Presenting the proceedings of a conference held recently at Northwestern University Evanston Illinois on the occasion of the retirement of noted mathematician Daniel Zelinsky this novel reference provides up to date coverage of topics in commutative and noncommutative ring extensions especially those involving issues of separability Galois theory and cohomology **Value Functions on Simple Algebras, and Associated Graded Rings** Jean-Pierre Tignol, Adrian R. Wadsworth, 2015-04-03 This monograph is the first book length treatment of valuation theory on finite dimensional division algebras a subject of active and substantial research over the last forty years Its development was spurred in the last decades of the twentieth century by important advances such as Amitsur's construction of non crossed products and Platonov's solution of the Tannaka Artin problem This study is particularly timely

because it approaches the subject from the perspective of associated graded structures This new approach has been developed by the authors in the last few years and has significantly clarified the theory Various constructions of division algebras are obtained as applications of the theory such as noncrossed products and indecomposable algebras In addition the use of valuation theory in reduced Whitehead group calculations after Hazrat and Wadsworth and in essential dimension computations after Baek and Merkurjev is showcased The intended audience consists of graduate students and research mathematicians

Separable Algebras Timothy J. Ford, 2017-09-26 This book presents a comprehensive introduction to the theory of separable algebras over commutative rings After a thorough introduction to the general theory the fundamental roles played by separable algebras are explored For example Azumaya algebras the henselization of local rings and Galois theory are rigorously introduced and treated Interwoven throughout these applications is the important notion of tale algebras Essential connections are drawn between the theory of separable algebras and Morita theory the theory of faithfully flat descent cohomology derivations reflexive lattices maximal orders and class groups The text is accessible to graduate students who have finished a first course in algebra and it includes necessary foundational material useful exercises and many nontrivial examples

Algebra, Analysis, Modelling and Optimization Arij Bouzelmate, Bouchaib Ferrahi, Olivier Lafitte, Benoît Rittaud, 2024-09-26 This volume features selected papers presented at the first French Moroccan Mathematics Days F2MDays 23 held at the Abdelmalek Essaadi University Morocco 2023 During these days a variety of scientific activities involving training workshops and international conferences on scientific mediation applied mathematics innovation and didactics of mathematics were held The event provided an opportunity to build bridges between mathematical communities reinforce existing international cooperation and initiate new ones hence contributing to the outreach of all involved parties
