Cytoplasmic Genetics And Evolution:

Cytoplasmic Genetics and Evolution Paul Grun, 1976 **Beyond the Gene** Jan Sapp, 1987 The scope and significance of cytoplasmic inheritance has been the subject of one of the longest controversies in the history of genetics In the first major book on the history of this subject Jan Sapp analyses the persistent attempts of investigators of non Mendelian inheritance to establish their claims in the face of strong resistance from nucleo centric geneticists and classical neo Darwinians A new perspective on the history of genetics is offered as he explores the conflicts which have shaped theoretical thinking about heredity and evolution throughout the century materialism vs vitalism reductionism vs holism preformation vs epigenesis neo Darwinism vs new Lamarckism and gradualism vs saltationism In so doing Sapp highlights competitive struggles for power among individuals and disciplinary groups He accepts that political interests and general social contexts may directly affect scientific ideas but develops the stronger thesis that social interests inside science itself are always involved in the content of scientific knowledge He goes on to show that there are no neutral judges in scientific controversies and investigates the social strategies and methodological rhetoric used by scientists when they defend or oppose a particular theory At the same time Sapp illustrates the social constraints that ensure the high cost and risk of entertaining unorthodox theories in the sciences

Integrating Ecology and Evolution in a Spatial Context Jonathan Silvertown, Janis Antonovics, 2001-08 The profound consequences of the deceptively obvious statement that plants stand still but their genes don't are only just becoming clear In this volume an international team of authors experts in the field of population biology aim to advance our understanding of ecological and evolutionary processes by integrating them within a common frame of reference space Processes operating at three different spatial scales are examined that of the population metapopulation and the geographical range Themes that recur at these different scales include spatial population dynamics population genetics at boundaries the imprint of spatial population dynamics upon genetic structure adaptation evolution of mating systems and the consequences of population genetics for ecological dynamics Whilst the focus is largely on plants the questions addressed are equally applicable to animals It will be a valuable tool for researchers and advanced students not only in this field but also evolutionary biology and resource management

Organizational Constraints on the Dynamics of Evolution John Maynard Smith, G. Vida, 1990 Selected papers from a symposium in Budapest held June 29 July 3 1987 are arranged in five parts constraints in the origin of life and cellular organization developmental constraints in evolution genetical constraints in evolution life history and evolution and the shaping of the macroevolutionary pattern The 31 contributions are united by a common approach to the rigorous mathematical analysis and description of the processes of natural selection Distributed by St Martin's Press Annotation copyrighted by Book News Inc Portland OR

Symbiosis as a Source of Evolutionary Innovation Lynn Margulis, René Fester, 1991 These original contributions by symbiosis biologists and evolutionary theorists address the adequacy of the prevailing neo Darwinian concept of evolution in the light of growing evidence that hereditary

symbiosis supplemented by the gradual accumulation of heritable mutation results in the origin of new species and morphological novelty A departure from mainstream biology the idea of symbiosis as in the genetic and metabolic interactions of the bacterial communities that became the earliest eukaryotes and eventually evolved into plants and animals has attracted the attention of a growing number of scientists These original contributions by symbiosis biologists and evolutionary theorists address the adequacy of the prevailing neo Darwinian concept of evolution in the light of growing evidence that hereditary symbiosis supplemented by the gradual accumulation of heritable mutation results in the origin of new species and morphological novelty They include reports of current research on the evolutionary consequences of symbiosis the protracted physical association between organisms of different species Among the issues considered are individuality and evolution microbial symbioses animal bacterial symbioses and the importance of symbiosis in cell evolution ecology and morphogenesis Lynn Margulis Distinguished Professor of Botany at the University of Massachusetts at Amherst is the modern originator of the symbiotic theory of cell evolution Once considered heresy her ideas are now part of the microbiological revolution Contributors Peter Atsatt Richard C Back David Bermudes Paola Bonfante Fasolo Ren Fester Lynda J Goff Anne Marie Grenier Ricardo Guerrero Robert H Haynes Rosmarie Honegger Gregory Hinkle Kwang W Jeon Bryce Kendrick Richard Law David Lewis Lynn Margulis John Maynard Smith Margaret J McFall Ngai Paul Nardon Kenneth H Nealson Kris Pirozynski Peter W Price Mary Beth Saffo Jan Sapp Silvano Scannerini Werner Schwemmler Sorin Sonea Toomas H Tiivel Robert K Trench Russell Vetter

Evolutionary Ecology Charles W. Fox, Derek A. Roff, Daphne J. Plant Evolution and the Origin of Crop Species James F. Hancock, 2012 The genetic variability that developed in plants during their evolution is the basic of their domestication and breeding into the crops grown today for food fuel and other industrial uses This third edition of Plant Evolution and the Origin of Crop Species brings the subject up to date with more emphasis on crop origins Beginning with a description of the processes of evolution in native and cultivated plants the book reviews the origins of crop domestication and their subsequent development over time All major crop species are discussed including cereals protein plants starch crops fruits and vegetables from their origins to conservation of their genetic resources for future development
