Cutting Tool Materials:

Ceramic Cutting Tools E. Dow Whitney, 2012-12-02 Interest in ceramics as a high speed cutting tool material is based primarily on favorable material properties As a class of materials ceramics possess high melting points excellent hardness and good wear resistance Unlike most metals hardness levels in ceramics generally remain high at elevated temperatures which means that cutting tip integrity is relatively unaffected at high cutting speeds Ceramics are also chemically inert against most workmetals

Cutting Tool Materials, 1988 ASM Specialty Handbook Joseph R. Davis, 1995-01-01 If you are involved with machining or metalworking or you specify materials for industrial components this book is an absolute must It gives you detailed and comprehensive information about the selection processing and properties of materials for machining and metalworking applications They include wrought and powder metallurgy tool steels cobalt base alloys cemented carbides cermets ceramics and ultra hard materials You ll find specific guidelines for optimizing machining productivity through the proper selection of cutting tool materials plus expanded coverage on the use of coatings to extend cutting tool and die life There is also valuable information on alternative heat treatments for improving the toughness of tool and die steels All new material on the correlation of heat treatment microstructures and properties of tool steels is supplemented with dozens of photomicrographs Information on special tooling considerations for demanding applications such as isothermal forging die casting of metal matrix composites and molding of corrosive plastics is also included And you ll learn about alternatives to ferrous materials for metalworking applications such as carbides cermets ceramics and nonferrous metals like aluminum nickel and copper base alloys
