Readers of the book will find the way to new dimensions in cardiologic practice.

Radiology Review Manual Wolfgang F. Dahmert, 2017-03-09 For more than 25 years Dr. Dahmert's Radiology Review Manual has earned its reputation as the green bible for board exam preparation in teaching situations and in the daily practice of radiology. A logical organization, extensive lists of image findings, and differential diagnoses, an accessible outline format, and a thorough index have made this reference the 1st choice for success on the written boards. The Eighth Edition has been completely updated to provide head-to-heel coverage of the information needed for today's general radiology practice.

Modern NMR Approaches to the Structure Elucidation of Natural Products Antony Williams, Gary Martin, David Rovnyak, 2016-12-12 The Ghanian plant *Cryptolepis sanguinolenta* is the source of a series of fascinating indoloquinoline alkaloids. The most unusual member of this alkaloid series was initially proposed to be a spiro nonacyclic structure named cryptospirolepine and was elucidated in 1993 based on the technologies available at that time. There were, however, several annoying attributes to the structure that bothered analysts for the ensuing 22 years. During the two decades that followed the initial work, there have been enormous developments in NMR technology. Using new experimental approaches, specifically homodecoupled $1D$ and $1H$ HD ADEQUATE NMR experiments developed in 2014, the structure of only a 700 mg sample of cryptospirolepine has been revised and is shown on the cover of this volume. The confluence of the NMR technological and methodological advances that allowed the revision of the structure of cryptospirolepine using a submilligram sample seems a fitting example for this book, which is dedicated to the NMR characterization of various classes of natural products. Volume 2 considers data processing and algorithmic-based analyses tailored to natural product structure elucidation and reviews the application of NMR to the analysis of a series of different natural product families, including marine natural products, terpenes, steroids, alkaloids, and carbohydrates. Volume 1 discusses contemporary NMR approaches, including optimized and future hardware and experimental approaches to obtain both the highest quality and most appropriate spectral data for analysis. These books, bringing together acknowledged experts, uniquely focus on the combination of experimental approaches and modern hardware and software applied to the structure elucidation of natural products. The volumes will be an essential resource for NMR spectroscopists, natural product chemists, and industrial researchers working on natural product analysis or the characterization of impurities and degradation products of pharmaceuticals that can be as scarce as natural product samples.
