Cycles Selected Writings:

Cycles in Humans and Nature John T. Burns, 1994 This volume is the first bibliography to be published on the broad subject of cycles in humans and nature The importance of cycles as a model for understanding the world is as old as the Bible and other ancient records of past civilizations The modern investigation of diverse fields of study has resulted in the concept of cycles once again gaining center stage as an interdisciplinary model for reaching a better understanding of the nature of our universe Major categories of cycles covered in this bibliography are Astrophysics Atmospheric Science Biology Botany Geoscience Medicine Social Science Zoology and Interdisciplinary Over 600 sources of information on thousands of cycles are carefully reviewed to enable the reader maximum access to the most substantive evidence for cycles in each field A balance of general readings as well as more technical articles is maintained throughout the bibliography An introduction provides an overview of the broad spectrum of information on cycles indicating those areas of controversy as well as of agreement The claims of cycles in social unrest economics and climatology are noted as well as the more well known cycles in biology physiology and medicine The volume has an extensive table of contents to facilitate the location of many subcategories of cycles An extensive index also enables the location of citations for specific researchers and for numerous subjects

Cosmic Influences on Humans, Animals, and Plants John T. Burns, 1997 This annotated bibliography makes available to the general reader and scholar a broad survey of the scientific literature on alleged cosmic influences on humans animals and plants To be included a study must involve the collection of data or be a commentary on studies based on data As some of the topics covered are still quite controversial in nature while other topics have been scientifically studied to some extent the terms alleged claimed or suggested are noted in the citations to remind the reader that a particular study has not necessarily been proven to be scientifically valid The four parts of *Cosmic Influences on Humans Animals and Plants* are organized around alleged effects of solar activity the moon the planets and possible mechanisms for such actions Some effects that the sun and moon are known to have on our daily lives such as the cycles of light and dark and the lunar tides have not been included because of their commonality However other effects such as those influences the moon has been shown to have over some animals have been included for the sake of completeness With subject and author indexes
