Wehrmann,Jorge Cortés,2008-12-28 Life began in the sea and even today most of the deep diversity of the planet is marine This is often forgotten especially in tropical countries like Costa Rica renowned for their rain forests and the multitude of life forms found therein Thus this book focusing on marine diversity of Costa Rica is particularly welcome How many marine species are there in Costa Rica The authors report a total of 6 777 species or 3 5% of the world s total Yet the vast majority of marine species have yet to be formally described Recent estimates of the numbers of species on coral reefs range from 1 9 million so that the true number of marine species in Costa Rica is certainly far higher In some groups the numbers are likely to be vastly higher because to date they have been so little studied Only one species of nematode is reported despite the fact that it has been said that nematodes are the most diverse of all marine groups In better studied groups such as mollusks and crustaceans reported numbers are in the thousands but even in these groups many species remain to be described Indeed the task of describing marine species is daunting if there really are about 9 million marine species and Costa Rica has 3 5% of them then the total number would be over 300 000 Clearly so much remains to be done that new approaches are needed Genetic methods have enormous promise in this regard *Conus of the Southeastern United States and Caribbean* Alan J. Kohn,2014-08-31 Conus is the largest genus of animals in the sea occurring throughout the world s tropical and subtropical oceans and contributing significantly to marine biodiversity The shells of these marine mollusks are prized for their amazing variety and extraordinary beauty The neurotoxic venoms they produce injected by a hollow harpoon like tooth into prey animals that are then paralyzed and swallowed whole have a range of pharmaceutical

applications from painkillers to antidepressants This beautifully illustrated book identifies 53 valid species of the southeastern United States and the Caribbean a region that supports a diverse but taxonomically challenging group of Conus Introductory chapters cover the evolution and phylogeny of the genus and notes on methodology are provided Detailed species accounts describe key identification features taxonomy distribution ecology toxicology life history and evolutionary relationships The book includes more than 2 100 photos of shells on 109 splendid color plates more than 100 additional photos many depicting live animals in color and 35 color distribution maps Identifies 53 valid species the first reassessment of western Atlantic Conus in more than seventy years Features more than 2 100 photos of shells on 109 color plates Blends the traditional shell character approach to identification with cutting edge shell and radular tooth morphometrics and molecular genetic analyses Includes color images of live animals as well as color distribution maps **The Mollusks** Charles F. Sturm, Timothy A. Pearce, Ángel Valdés, 2006 Mollusks have been important to humans since our earliest days Initially when humans were primarily interested in what they could eat or use mollusks were important as food ornaments and materials for tools Over the centuries as human knowledge branched out and individuals started to study the world around them mollusks were important subjects for learning how things worked In this volume the editors and contributors have brought together a broad range of topics within the field of malacology It is our expectation that these topics will be of interest and use to amateur and professional malacologists *Proceedings of The Academy of Natural Sciences (Vol. 152, 2002)* , **The Festivus** ,2007 **The Nautilus** ,1914 Pacific Coast Nudibranchs David W Behrens,2004 **Collectible Shells of Southeastern U.S., Bahamas & Caribbean** Robert Tucker Abbott,1984 **The Veliger** ,2008 Deep Water Pyramidelloidea of the Tropical South Pacific: Turbonilla and Related Genera Philippe Bouchet,2010 Tropical Deep Sea Benthos is an ongoing series on the deep sea fauna of the tropical Indo Pacific It is the continuation of Resultats des Campagnes MUSORSTOM *International Journal of Malacology* ,2005 **Novapex** ,2009 **Caribbean Sea Slugs** Ángel Valdés,2006
