Control of Messenger RNA Stability Joel G. Belasco, George Brawerman, 2012-12-02 This is the first comprehensive review of mRNA stability and its implications for regulation of gene expression Written by experts in the field Control of Messenger RNA Stability serves both as a reference for specialists in regulation of mRNA stability and as a general introduction for a broader community of scientists Provides perspectives from both prokaryotic and eukaryotic systems Offers a timely comprehensive review of mRNA degradation its regulation and its significance in the control of gene expression Discusses the mechanisms RNA structural determinants and cellular factors that control mRNA degradation Evaluates experimental procedures for studying mRNA degradation Control of Messenger RNA Stability in Saccharomyces Cerevisiae Sean Wilson, 2001 Control of Messenger RNA Stability Joel Belasco, Joel G. Belasco, George Brawerman, 1993-04-06 This is the first comprehensive review of mRNA stability and its implications for regulation of gene expression Written by experts in the field Control of Messenger RNA Stability serves both as a reference for specialists in regulation of mRNA stability and as a general introduction for a broader community of scientists Provides perspectives from both prokaryotic and eukaryotic systems Offers a timely comprehensive review of mRNA degradation its regulation and its significance in the control of gene expression Discusses the mechanisms RNA structural determinants and cellular factors that control mRNA degradation Evaluates experimental procedures for studying mRNA degradation *Regulation of Messenger RNA Stability in Lemna Gibba* Ruth Sidell, 1997 **mRNA Metabolism & Post-Transcriptional Gene Regulation** Joe B. Harford, David R. Morris, 1997-03-28 mRNA METABOLISM however there is a growing recognition of and appreciation for the importance of the many regulatory mechanisms that take place after RNA synthesis has been completed mRNA Metabolism and Post Transcriptional Gene Regulation is the first comprehensive overview of the various modes of gene regulation that exist post transcriptionally Collecting studies by some of the top researchers in the field this volume provides both an up to date review of the complex life of an mRNA molecule and an introduction to current work on the diversity of mechanisms of post transcriptional reactions Topics covered include RNA structure Mammalian RNA editing RNA export from the nucleus The fundamentals of translation initiation Control of mRNA decay in plants mRNA metabolism and cancer Control of mRNA stability during herpes simplex virus infection Regulation of mRNA expression in HIV 1 and other complex retroviruses Nucleases RNA localization A timely contribution to the understanding of genetic regulatory mechanisms mRNA Metabolism and Post Transcriptional Gene Regulation provides a basis from which potential therapeutic strategies may be developed This book will be of vital interest to cell and molecular biologists at all levels from graduate students to senior investigators clinical researchers and professionals in the pharmaceutical and biotechnology industries **The Control of MRNA Turnover as a Mechanism of Glucose Repression in Saccharomyces Cerevisiae** Geoffrey P. L. Cereghino, 1995 Regulation of Photosynthesis Eva-Mari Aro, B. Andersson, 2006-04-11 This book covers the expression of photosynthesis

related genes including regulation both at transcriptional and translational levels It reviews biogenesis turnover and senescence of thylakoid pigment protein complexes and highlights some crucial regulatory steps in carbon metabolism

Cytoplasmic fate of messenger RNA Philippe Jeanteur,2012-12-06 Among all cellular RNA species of the three main types ribosomal RNA transfer RNA or messenger RNA be they from prokaryotic or eukaryotic organisms the prokaryotic mRNA is unique in that it has no precursor and is synthesized in the same mature form as it is translated into proteins In fact ribosomes join the nascent mRNA chain and engage in protein synthesis long before its transcription is complete Provisions are even made for slowing down the ribosomes at some sites to prevent them from catching up with the RNA polymerase Of course such a situation is only possible in the prokaryotic world where there is no such thing as a nuclear membrane physically secluding the transcription process from the cytoplasm where translation is restricted Quite in the opposite extreme the eukaryotic pre messenger RNA has to suffer many and sometimes drastic steps of maturation capping polyadenylation splicing edition before the decision is made to export it to the cytoplasm That is where it enters the scope of this book Once in the cytoplasm many options are still open to it its entrance into polysomes may be delayed as it is in unfertilized eggs or merely prohibited ferritin mRNA in iron starved cells directed to specific locations within the cytoplasm or be more or less rapidly degraded During gametogenesis and early development translational control is probably the most significant level of gene expression

Cumulated Index Medicus ,1985 **Regulation of Cat Messenger RNA Turnover in E. Coli** Barbara Jean Meyer,1990 Studies on MRNA Decay and Transcriptional Regulation of the Lac Operon of Escherichia Coli Hsiu-ying Wei,1990 Regulation of Mammalian Messenger RNA Stability Via the Open Reading Frame Megan E. Forrest,2020 The role of mRNA decay in dynamic control of gene expression has long been appreciated where changes in mRNA stability in response to various cellular conditions can have widespread effects on steady state mRNA levels While mRNA stability is controlled in part by ribonucleoprotein composition the primary codon sequence within the open reading frame has increasingly been recognized as an important determinant of stability in eukaryotes particularly with regard to differential utilization and incorporation of codons by the translation machinery The data presented in this dissertation expand upon previous studies linking differences in codon composition in the mRNA open reading frame to effects on translation and stability in budding yeast *S cerevisiae* The principle aim of this research was to characterize the effects of open reading frame sequence on mRNA decay rates in mammalian cells Using a combination of single gene mRNA reporters and transcriptome wide half life determinations by metabolic labeling in human HeLa and Chinese hamster ovary cells we determined that both synonymous codon content and encoded amino acid sequence are determinants of mRNA stability in mammalian cells in contrast to previous studies in other model organisms Further the relative codon specific stabilities observed in HeLa were found to be associated with both cognate tRNA availability and intracellular amino acid levels using empirical measurements of tRNA and amino acid levels Accordingly codon and amino acid content were found to

contribute significantly to the observed variation in half lives for endogenous mRNAs within functionally related gene groups Further both codon and amino acid based effects on stability were found to vary among different organisms supporting the idea that open reading frame based effects on stability differ throughout evolution The novel finding that amino acid content within a given mRNA transcript contributes to its stability raises the possibility of control of gene expression regulation in response to changes in metabolic status which can be applied towards a better understanding of various disease mechanisms Collectively these results also have implications for improving our understanding of general mRNA decay mechanisms in mammals highlighting important potential differences between yeast and higher eukaryotes at the level of mRNA sequence decoding that merit further exploration
