Pardalos, Vitaliy A. Yatsenko, 2010-03-14 The present book is based on results of scienti c investigations and on the materials of special courses o ered for graduate and undergraduate students The purpose of this book is to acquaint the reader with the developments in bilinear systems theory and its applications Particular attention is paid to control of open physical processes functioning in a nonequilibrium mode The text consists of eight chapters Chapter 1 is concerned with the problems of systems analysis of bilinear processes Chapter 2 solves the problem of optimal control of bilinear systems on the basis of di er tial geometry methods Chapter 3 deals with the progress made in an adaptive estimation technique Chapter 4 is devoted to the application of the Yang Mills elds to investigation of nonlinear control problems Chapter 5 considers intelligent sensors used to examine weak signals This chapter also describes and analyzes bilinear models of intelligent sensing elements Chapter 6 illustrates control problems of a quantum system Chapter 7 discusses the problems of control and identi cation in systems with chaotic dynamics Finally Chapter 8 examines the c trolled processes running in biomolecular systems This book is directed to students postgraduate students and speci ists engaged in the elds of control of physical processes quantum and molecular computing biophysics and physical information science **Control of Quantum Systems** Nelson Boli?var, 2016-11-30 The control of quantum physical systems refers to those whose behaviour is dominated by the laws of quantum mechanics The effective capabilities of manipulating matter and light at those scales is steadily growing and new experimental and technological possibilities are in reach This book covers the basics of quantum systems using theoretical and applied approaches **Control of Quantum Systems** Shuang Cong, 2014-02-27 Advanced research reference examining the closed and open quantum systems Control of Quantum Systems Theory and Methods provides an insight into the modern approaches to control of quantum systems evolution with a focus on both closed and open dissipative quantum systems The topic is timely covering the newest research in the field and presents and summarizes practical methods and addresses the more theoretical aspects of control which are of high current interest but which are not covered at this level in

other text books The quantum control theory and methods written in the book are the results of combination of macro control theory and microscopic quantum system features As the development of the nanotechnology progresses the quantum control theory and methods proposed today are expected to be useful in real quantum systems within five years The progress of the quantum control theory and methods will promote the progress and development of quantum information quantum computing and quantum communication Equips readers with the potential theories and advanced methods to solve existing problems in quantum optics information computing mesoscopic systems spin systems superconducting devices nano mechanical devices precision metrology Ideal for researchers academics and engineers in quantum engineering quantum computing quantum information quantum communication quantum physics and quantum chemistry whose research interests are quantum systems control

**New Technical Books** New York Public Library,1926 **Automation and Remote Control** ,1990 **Ultrafast Optics IV** Ferenc Krausz,Georg Korn,Paul Corkum,Ian A Walmsley,2012-08-10 The papers in this volume cover the major areas of research activity in the field of ultrafast optics at the present time and they have been selected to provide an overview of the current state of the art The purview of the field is the methods for the generation amplification and characterization of electromagnetic pulses with durations from the pico to the attosecond range as well as the technical issues surrounding the application of these pulses in physics chemistry and biology The contributions were solicited from the participants in the Ultrafast Optics IV Conference held in Vienna Austria in June 2003 The purpose of the conference is similar to that of this book to provide a forum for the latest advances in ultrafast optical technology Ultrafast light sources provide a means to observe and manipulate events on the scale of atomic and molecular dynamics This is possible either through appropriate shaping of the time dependent electric field or through the application of fields whose strength is comparable to the binding forces of the electrons in atoms and molecules Recent advances discussed here include the generation of pulses shorter than two optical cycles and the ability to measure and to shape them in all degrees of freedom with unprecedented 2 21 2 precision and to amplify them to the Zettawatt cm 10 W cm range
