Controlling Technology Contemporary Issues:

Controlling Technology Eric Katz, 2002-06-01 Do we control technology or does technology control us Explosive progress in the twentieth century has led to the disquieting perception that technology is not the servant of humanity but its master Controlling Technology brings together conflicting views concerning the nature of modern technology as it relates to the quality of everyday life and to the larger problem of human survival on this planet The thesis that technology has indeed become autonomous is contrasted with the position that by its very nature technology can exist only under human control Like the first edition this revised edition contains classic essays that are fundamental to the study of technology To these have been added recent scholarly treatments that analyze the classic tradition as well as updated popular essays A whole new section of case studies delves into the topics of computers information and virtual reality Also included are essays on technology and the pros and cons of environmental restoration This excellent collection of essays will be of great value as a reader for courses on technology and human values and the social dimensions of technology Contemporary Issues in Systems Science and Engineering MengChu Zhou, Han-Xiong Li, Margot Weijnen, 2015-04-20 Various systems science and engineering disciplines are covered and challenging new research issues in these disciplines are revealed They will be extremely valuable for the readers to search for some new research directions and problems Chapters are contributed by world renowned systems engineers Chapters include discussions and conclusions Readers can grasp each event holistically without having professional expertise in the field **Communication, Technology, and Politics in the Information Age** Gerald Sussman, 1997-09-09 Gerald Sussman offers a detailed critical analysis of the political dimensions of 21st century communication information technologies mass media and transnational networks *Controlling Technology* Eric Katz, Andrew Light, William B. Thompson, 2003 No Marketing Blurb Crisis, Exposure, Imagination Fred Abong, Craig Condella, Jordan E. Miller, 2017-05-11 Unprecedented changes appear to be occurring more often and more rapidly than ever before We notice these changes and events more readily due to the advent of the information age and the continual technological innovation that has accompanied it New methods of the manufacture and the dissemination of information expose us to crises in ways previously impossible These crises often lead to the exposure of new ways of understanding The lifting of veils allows us to see these crises more clearly In turn these epiphanies invite imaginative and creative responses This volume interprets this situation in a new way not just as an examination of what happens to us and the variety of crises we face but the way in which we understand them How do we produce new ways of thinking and discussing crises What is the role of imagination in both the description of crisis and the response to it How are we changed and how do we change our thinking and writing as a result There are two sides of the veil with crisis on one side and imagination on the other The issue of lifting veils of revelatory change expresses the contributors interest in the intersection of and collaboration between different disciplines As an interdisciplinary project this book takes a new approach in discussing our current condition Lifting

the veil radically undoes the past opens us to the future through change and provides the possibility for vision and hope

Techno-Fixers Sean F. Johnston, 2020-03-26 This is the story of a seductive idea Over the past century the potential of new technology to solve social dilemmas has captivated modern culture From apps that encourage physical activity to airport scanners meant to prevent terrorism the concept that clever innovation can improve society is irresistible but faith in such technological fixes is seldom questioned Where did this idea come from what makes it so appealing and how does it endanger our future Techno Fixers traces the source of modern confidence in technology to engineering hubris radical utopian movements science fiction fanzines policy makers soundbites corporate marketing and optimistic consumer culture from the turn of the twentieth century until today Sean Johnston demonstrates that through the promotion of prominent government scientists technocrats entrepreneurs and popular media modern invention became the favourite tool for addressing human problems and society's ills Nonetheless when it comes to assessing the success of cigarette filters as the solution to safe smoking or DDT as the answer for agricultural productivity the evidence is sobering Cautioning that the rhetoric of technological fixes seldom matches reality Johnston examines how employing innovation to bypass traditional methods can foster as many problems as it solves A critical examination of modern faith in technology Techno Fixers evaluates past mistakes present implications and future opportunities for innovating societies
