ПИТРИМОВИЧ Pitrimovich Razmyslov, 1994 During the past forty years a new trend in the theory of associative algebras Lie algebras and their representations has formed under the influence of mathematical logic and universal algebra namely the theory of varieties and identities of associative algebras Lie algebras and their representations The last twenty years have seen the creation of the method of 2 words and alpha functions which allowed a number of problems in the theory of groups rings Lie algebras and their representations to be solved in a unified way The possibilities of this method are far from exhausted This book sums up the applications of the method of 2 words and alpha functions in the theory of varieties and gives a systematic exposition of contemporary achievements in the theory of identities of algebras and their representations closely related to this method The aim is to make these topics accessible to a wider group of mathematicians

two benchmark breakthroughs underlying the development of algebraic K theory and the recent advances in the theory of motives The volume begins with short notes by Mac Lane May Stasheff and others on the early and recent history of the subject But the bulk of the volume consists of research papers on topics that have been strongly influenced by Boardman s work Articles give readers a vivid sense of the current state of the theory of homotopy invariant algebraic structures Also included are two major foundational papers by Goerss and Strickland on applications of methods of algebra i e Dieudonn modules and formal schemes to problems of topology Boardman is known for the depth and wit of his ideas This volume is intended to reflect and to celebrate those fine characteristics
