Algebraic Methods:

Algebraic Methods and q-Special Functions Jan Felipe Van Diejen,Luc Vinet,1999 There has been revived interest in recent years in the study of special functions Many of the latest advances in the field were inspired by the works of R A Askey and colleagues on basic hypergeometric series and I G Macdonald on orthogonal polynomials related to root systems Significant progress was made by the use of algebraic techniques involving quantum groups Hecke algebras and combinatorial methods The CRM organized a workshop for key researchers in the field to present an overview of current trends This volume consists of the contributions to that workshop Topics include basic hypergeometric functions algebraic and representation theoretic methods combinatorics of symmetric functions root systems and the connections with integrable systems   **Algebraic Methods in Quantum Chemistry and Physics** Francisco M. Fernandez,E.A. Castro,1995-10-24 Algebraic Methods in Quantum Chemistry and Physics provides straightforward presentations of selected topics in theoretical chemistry and physics including Lie algebras and their applications harmonic oscillators bilinear oscillators perturbation theory numerical solutions of the Schr dinger equation and parameterizations of the time evolution operator The mathematical tools described in this book are presented in a manner that clearly illustrates their application to problems arising in theoretical chemistry and physics The application techniques are carefully explained with step by step instructions that are easy to follow and the results are organized to facilitate both manual and numerical calculations Algebraic Methods in Quantum Chemistry and Physics demonstrates how to obtain useful analytical results with elementary algebra and calculus and an understanding of basic quantum chemistry and physics   A Historical Survey of Algebraic Methods of Approximating the Roots of Numerical Higher Equations Up to the Year 1819 Martin Andrew Nordgaard,1922   *Algebraic Methods in Cryptography* Lothar Gerritzen,2006 The book consists of contributions related mostly to public key cryptography including the design of new cryptographic primitives as well as cryptanalysis of previously suggested schemes Most papers are original research papers in the area that can be loosely defined as non commutative cryptography this means that groups or other algebraic structures which are used as platforms are non commutative   Lie Algebraic Methods in Integrable Systems Amit K. Roy-Chowdhury,2021-01-04 Over the last thirty years the subject of nonlinear integrable systems has grown into a full fledged research topic In the last decade Lie algebraic methods have grown in importance to various fields of theoretical research and worked to establish close relations between apparently unrelated systems The various ideas associated with Lie algebra and Lie groups can be used to form a particularly elegant approach to the properties of nonlinear systems In this volume the author exposes the basic techniques of using Lie algebraic concepts to explore the domain of nonlinear integrable systems His emphasis is not on developing a rigorous mathematical basis but on using Lie algebraic methods as an effective tool The book begins by establishing a practical basis in Lie algebra including discussions of structure Lie loop and Virasor groups quantum tori and Kac Moody algebras and gradation It then offers a detailed

discussion of prolongation structure and its representation theory the orbit approach for both finite and infinite dimension Lie algebra The author also presents the modern approach to symmetries of integrable systems including important new ideas in symmetry analysis such as gauge transformations and the soldering approach He then moves to Hamiltonian structure where he presents the Drinfeld Sokolov approach the Lie algebraic approach Kupershmidt s approach Hamiltonian reductions and the Gelfand Dikii formula He concludes his treatment of Lie algebraic methods with a discussion of the classical r matrix its use and its relations to double Lie algebra and the KP equation **Algebraic Methods of Mathematical Logic** Ladislav Rieger,2014-05-12 Algebraic Methods of Mathematical Logic focuses on the algebraic methods of mathematical logic including Boolean algebra mathematical language and arithmetization The book first offers information on the dialectic of the relation between mathematical and metamathematical aspects metamathematico mathematical parallelism and its natural limits practical applications of methods of mathematical logic and principal mathematical tools of mathematical logic The text then elaborates on the language of mathematics and its symbolization and recursive construction of the relation of consequence Discussions focus on recursive construction of the relation of consequence fundamental descriptively semantic rules mathematical logic and mathematical language as a material system of signs and the substance and purpose of symbolization of mathematical language The publication examines expressive possibilities of symbolization intuitive and mathematical notions of an idealized axiomatic mathematical theory and the algebraic theory of elementary predicate logic Topics include the notion of Boolean algebra based on joins meets and complementation logical frame of a language and mathematical theory and arithmetization and algebraization The manuscript is a valuable reference for mathematicians and researchers interested in the algebraic methods of mathematical logic **Algebraic Methods: Theory, Tools and Applications** Martin Wirsing,Jan A. Bergstra,1989-09-20 **Algebraic Methods in Semantics** M. Nivat,John C. Reynolds,1985 This book which contains contributions from leading researchers in France USA and Great Britain gives detailed accounts of a variety of methods for describing the semantics of programming languages i e for attaching to programs mathematical objects that encompass their meaning Consideration is given to both denotational semantics where the meaning of a program is regarded as a function from inputs to outputs and operational semantics where the meaning includes the sequence of states or terms generated internally during the computation The major problems considered include equivalence relations between operational and denotational semantics rules for obtaining optimal computations especially for nondeterministic programs equivalence of programs meaning preserving transformations of programs and program proving by assertions Such problems are discussed for a variety of programming languages and formalisms and a wealth of mathematical tools is described **Algebraic Structures in Natural Language** Shalom Lappin,Jean-Philippe Bernardy,2022-12-23 Algebraic Structures in Natural Language addresses a central problem in cognitive science concerning the learning procedures through which humans acquire and represent natural language Until

recently algebraic systems have dominated the study of natural language in formal and computational linguistics AI and the psychology of language with linguistic knowledge seen as encoded in formal grammars model theories proof theories and other rule driven devices Recent work on deep learning has produced an increasingly powerful set of general learning mechanisms which do not apply rule based algebraic models of representation The success of deep learning in NLP has led some researchers to question the role of algebraic models in the study of human language acquisition and linguistic representation Psychologists and cognitive scientists have also been exploring explanations of language evolution and language acquisition that rely on probabilistic methods social interaction and information theory rather than on formal models of grammar induction This book addresses the learning procedures through which humans acquire natural language and the way in which they represent its properties It brings together leading researchers from computational linguistics psychology behavioral science and mathematical linguistics to consider the significance of non algebraic methods for the study of natural language The text represents a wide spectrum of views from the claim that algebraic systems are largely irrelevant to the contrary position that non algebraic learning methods are engineering devices for efficiently identifying the patterns that underlying grammars and semantic models generate for natural language input There are interesting and important perspectives that fall at intermediate points between these opposing approaches and they may combine elements of both It will appeal to researchers and advanced students in each of these fields as well as to anyone who wants to learn more about the relationship between computational models and natural language *Algebraic Methods in Game Theory* Ruchira Sreemati Datta,2003 *Algebraic Methods II: Theory, Tools and Applications* Jan A.
