Alien Predators:

Alien Removals Under Operation Predator United States. Congress. House. Committee on the Judiciary. Subcommittee on Immigration, Border Security, and Claims, 2004 *Carnivores of Australia* Alistair Glen, Christopher Dickman, 2014-11-05 The Australian continent provides a unique perspective on the evolution and ecology of carnivorous animals In earlier ages Australia provided the arena for a spectacular radiation of marsupial and reptilian predators The causes of their extinctions are still the subject of debate Since European settlement Australia has seen the extinction of one large marsupial predator the thylacine another the Tasmanian devil is in danger of imminent extinction and still others have suffered dramatic declines By contrast two recently introduced predators the fox and cat have been spectacularly successful with devastating impacts on the Australian fauna *Carnivores of Australia Past Present and Future* explores Australia s unique predator communities from pre historic historic and current perspectives It covers mammalian reptilian and avian carnivores both native and introduced to Australia It also examines the debate surrounding how best to manage predators to protect livestock and native biodiversity Readers will benefit from the most up to date synthesis by leading researchers and managers in the field of carnivore biology By emphasising Australian carnivores as exemplars of flesh eaters in other parts of the world this book will be an important reference for researchers wildlife managers and students worldwide

Conservation Biology of Hawaiian Forest Birds Thane K. Pratt, Carter T. Atkinson, Paul C. Banko, Bethany L. Woodworth, James D. Jacobi, 2009-01-01 Hawaii s forest bird community is the most insular and most endangered in the world and serves as a case study for threatened species globally Ten have disappeared in the past thirty years nine are critically endangered and even common species are currently in decline Thane K Pratt his coeditors and collaborators all leaders in their field describe the research and conservation efforts over the past thirty years to save Hawaii s forest birds They also offer the most comprehensive look at the reasons for these extinctions and attempts to overcome them in the future Among the topics covered in this book are trends in bird populations environmental and genetic factors limiting population size avian diseases predators and competing alien bird species Color plates by award winning local photographer Jack Jeffrey illustrate all living species discussed or described *Wildlife Research* , 2015 *Conceptual Ecology and Invasion Biology: Reciprocal Approaches to Nature* Marc W. Cadotte, Sean M. McMahon, Tadashi Fukami, 2006-07-19 The conservation threat represented by invasive species is well known but the scientific opportunities are underappreciated Invasion studies have historically been largely directed at the important job of collecting case studies Invasion biology has matured to the point of being able to incorporating itself into the heart of ecology and should be viewed as extensions or critical experiments of ecological theory In this edited volume global experts in ecology and evolutionary biology explore how theories in ecology elucidate the invasion processes while also examining how specific invasions informs ecological theory This reciprocal benefit is highlighted in a number of scales of organization population community and biogeographic while employing example

invaders in all major groups of organisms and from a number of regions around the globe The chapters in this volume utilize many of the cutting edge observational experimental analytical and computational methods used in modern ecology Through merging conceptual ecology and invasion biology we can obtain a better understanding of the invasion process while also developing a better understanding of how ecological systems function

page color section **Alien Species and Evolution** George W. Cox,2004-06-25 In Alien Species and Evolution biologist George W Cox reviews and synthesizes emerging information on the evolutionary changes that occur in plants animals and microbial organisms when they colonize new geographical areas and on the evolutionary responses of the native species with which alien species interact The book is broad in scope exploring information across a wide variety of taxonomic groups trophic levels and geographic areas It examines theoretical topics related to rapid evolutionary change and supports the emerging concept that species introduced to new physical and biotic environments are particularly prone to rapid evolution The author draws on examples from all parts of the world and all major ecosystem types and the variety of examples used gives considerable insight into the patterns of evolution that are likely to result from the massive introduction of species to new geographic regions that is currently occurring around the globe Alien Species and Evolution is the only state of the art review and synthesis available of this critically important topic and is an essential work for anyone concerned with the new science of invasion biology or the threats posed by invasive species Mathematical model for the biocontrol of vector-borne viral diseases in solanaceous vegetable plants Timothy Ado Shamaki,2023-03-03 Doctoral Thesis Dissertation from the year 2022 in the subject Mathematics Applied Mathematics Modibbo Adama University of Technology Yola language English abstract This thesis treats the issue of Vector Borne Virus Diseases VBVDs that are transmitted in solanaceous vegetable plants by incorporating three species of vectors aphids thrips and whiteflies A mathematical model was developed that used lady beetles as biological control agents for controlling the spread of diseases in solanaceous vegetable plants through predation The research adopted the linearization method This research is restricted to a biological control of VBVDs of solanaceous vegetable plants using compartmental modeling approach The model is a system of first order nonlinear ODEs Additionally the study is limited to three solanaceous plants i e tomato pepper and eggplant This is because solanaceous plants are among the world s most cultivated crops and given proper conditions and regular maintenance they are relatively easy to grow We focused on viral diseases that affect solanaceous vegetable plants especially Yellow Leaf Curl Virus YLCV Spotted Wilt Virus SWV and Cucumber Mosaic Virus CMV It is a common knowledge that these plant viruses also require some sort of carrier known as vectors to transmit the pathogen from plant to plant Therefore the study is demarcated to a class of aphids green peach aphids thrips T tabasi and whiteflies Bemisia tabasi because these ones are reported as the common problem associated with solanaceous plants which can be controlled by natural predatory enemies ladybugs hippodamia convergens **Newsletter** , **Annales zoologici Fennici** ,2006 **Atlas of Alien and Translocated Indigenous Aquatic Animals in Southern Africa** Irene J.
