Chrystal, 2015-06-12 Excerpt from Algebra Vol 2 An Elementary Text Book for the Higher Classes of Secondary Schools and for Colleges The present edition of this volume has been carefully revised and corrected throughout The principal alterations will be found in the Theory of Series which has been developed a little in some places with a view to rendering it more useful to students proceeding to study the Theory of Functions In the interest of the same class of readers I have added to the chapter on limits a sketch of the modern theory of irrational quantity one of the most important parts of the purely Arithmetical Theory of Algebraic Quantity which forms as the fashion of mathematical thinking now runs the most widely accepted basis for the great structure of Pure Analysis reared by the masters of our science I am indebted for proof reading and for useful criticism to my friends Prof G A Gibson and Mr C Tweedie B Sc It is but right however to add that the careful and intelligent readers of the Pitt Press have rendered the work of correcting the proofs of this volume more of a sinecure than it often is when mathematical works are in question About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *Commutative Algebra* Oscar Zariski, Pierre Samuel, 2013-11-11 This second volume of our treatise on commutative algebra deals largely with three basic topics which go beyond the more or less classical material of volume I and are on the whole of a more advanced nature and a more recent vintage These topics are a valuation theory b theory of polynomial and power series rings including generalizations to graded rings and modules c local algebra Because most of these topics have either their source or their best motivation in algebraic geom etry the algebro geometric connections and applications of the purely algebraic material are constantly stressed and abundantly scattered through out the exposition Thus this volume can be used in part as an introduc tion to some basic concepts and the arithmetic foundations of algebraic geometry The reader who is not immediately concerned with geometric applications may omit the algebro geometric material in a first reading see Instructions to the reader page vii but it is only fair to say that many a reader will find it more instructive to find out immediately what is the geometric motivation behind the purely algebraic material of this volume The first 8 sections of Chapter VI including 5bis deal directly with properties of places rather than with those of the valuation associated with a place These therefore are properties of valuations in which the value group of the valuation is not involved
