Algebraic Structure Of Pseudocompact Groups:

Algebraic Structure of Pseudocompact Groups Dikran N. Dikranjan, 1998

Algebraic Structure of Pseudocompact Groups Dikran N. Dikranjan, Dmitri Shakhmatov, 1998-01-01 The fundamental property of compact spaces that continuous functions defined on compact spaces are bounded served as a motivation for E Hewitt to introduce the notion of a pseudocompact space The class of pseudocompact spaces proved to be of fundamental importance in set theoretic topology and its applications This clear and self contained exposition offers a comprehensive treatment of the question When does a group admit an introduction of a pseudocompact Hausdorff topology that makes group operations continuous Equivalently what is the algebraic structure of a pseudocompact Hausdorff group The authors have adopted a unifying approach that covers all known results and leads to new ones Results in the book are free of any additional set theoretic assumptions

Topological Groups and Related Structures, An Introduction to Topological Algebra. Alexander Arhangel'skii, Mikhail Tkachenko, 2008-05-01 Algebra and topology the two fundamental domains of mathematics play complementary roles Topology studies continuity and convergence and provides a general framework to study the concept of a limit Much of topology is devoted to handling in finite sets and in finite itself the methods developed are qualitative and in a certain sense irrational algebra studies all kinds of operations and provides a basis for algorithms and calculations Very often the methods here are nitistic in nature Because of this difference in nature algebra and topology have a strong tendency to develop independently not in direct contact with each other However in applications in higher level domains of mathematics such as functional analysis dynamical systems representation theory and others topology and algebra come in contact most naturally Many of the most important objects of mathematics represent a blend of algebraic and of topological structures Topological functions spaces and linear topological spaces in general topological groups and topological fields transformation groups topological lattices are objects of this kind Very often an algebraic structure and a topology come naturally together this is the case when they are both determined by the nature of the elements of the set considered a group of transformations is a typical example The rules that describe the relationship between a topology and an algebraic operation are almost always transparent and natural the operation has to be continuous jointly or separately

Pseudocompact Topological Spaces Michael Hrušák, Ángel Tamariz-Mascarúa, Mikhail Tkachenko, 2018-07-19 This book intended for postgraduate students and researchers presents many results of historical importance on pseudocompact spaces In 1948 E Hewitt introduced the concept of pseudocompactness which generalizes a property of compact subsets of the real line A topological space is pseudocompact if the range of any real valued continuous function defined on the space is a bounded subset of the real line Pseudocompact spaces constitute a natural and fundamental class of objects in General Topology and research into their properties has important repercussions in diverse branches of Mathematics such as Functional Analysis Dynamical Systems Set Theory and Topological Algebraic structures The collection of authors of this volume include pioneers in their fields who

have written a comprehensive explanation on this subject In addition the text examines new lines of research that have been at the forefront of mathematics There is as yet no text that systematically compiles and develops the extensive theory of pseudocompact spaces making this book an essential asset for anyone in the field of topology
