## **Communication Problems In Autism:**

*Communication Problems in Autism* Eric Schopler, Gary B. Mesibov, 1985-05-31 The North Carolina State Legislature's mandate to Division TEACCH has three major components: First to provide the most up to date and cost effective services possible for families with autistic or similar language impaired children; second to conduct research aimed toward the better understanding of such devastating disorders; and third to provide training for the professionals needed to pursue these goals. One element in achieving these aims is to hold annual conferences on topics of special importance to the understanding and treatment of autism and similar disorders. In addition to training professionals and parents on the most recent developments in each conference topic, we are publishing a series *Current Issues in Autism* based on these conferences. These books are not however simply the published proceedings of the conference papers. Instead, some chapters are expanded conference presentations, whereas others come from national and international experts whose work is beyond the scope of the conference but essential in our attempt at comprehensive coverage of the conference theme. These volumes are intended to provide the most current knowledge and professional practice available to us at the time.

She offers an explanation of why certain approaches, for example PECS, might work with some autistic children but not others. Offering real insights, the *What They Say* sections enable the reader to see through the eyes of autistic individuals and to understand their language differences first hand. *What We Can Do to Help* sections throughout the book give practical recommendations on what to do in order to help autistic individuals use their natural mechanisms to learn and develop social and communicative skills. The final chapters are devoted to assessment and intervention issues with practical recommendations for selecting appropriate methods and techniques to enhance communication based on the specific mode of communication a person uses.

**The Effect of Improvisational Music Therapy on the Communicative Behaviors of Autistic Children** Cindy Lu Edgerton,1993 Clinicians researchers and educators have studied extensively the communication deficits

of people diagnosed with autism and have commented frequently on their unusual responsiveness to music. The purpose of this study was to determine the effectiveness of improvisational music therapy based on Nordoff and Robbins' 1977 Creative Music Therapy approach on autistic children's communicative behaviors. Eleven autistic children ranging in age from 6 to 9 years participated in individual improvisational music therapy sessions for a period of ten weeks. A reversal design was applied. The Checklist of Communicative Responses Acts Score Sheet (CRASS), designed specifically for this study, was used to measure the subjects' musical and nonmusical communicative behaviors. Results strongly suggest the efficacy of improvisational music therapy in increasing autistic children's communicative behaviors. Significant differences were found between the subjects' first session CRASS scores and those of their last sessions. p. 100. *Teaching Students with Language and Communication Disabilities*. S.
