Weybrew,1992-11-30 Benjamin B Weybrew has developed the ABC model of stress built upon a foundation of nearly three decades of stress research with nuclear submariners With its connotation as a fundamental or elementary principle of stress dynamics the ABC model is based upon three basic concepts in learning and vector psychology Antecedent conditions Behavior and Consequences This model integrates Lewin s topological psychology with the major learning and perceptual theories One of the major features of the book is the inclusion of preventive and therapeutic strategies for acute and chronic Patterns of Stress Reactivity or POSR These intervention

techniques have heuristic value for the researcher and teacher alike while being described in language readily understood by the lay reader To sum up the ABC model of stress is based upon three basic facts of human behavior 1 a person s behavior has a directional component symbolized by vectors in ABC 2 these goal directed vectors contain channelled energy and 3 when this energy intersects environmental impediments or barriers stressors of differing degrees of permeability or inertia then POSR of varying intensity are likely to occur Stress management strategies are straightforward beginning with the identification and ranking of stressors and then applying the most appropriate of the thirty six intervention procedures described in the book Suitable for all stress researchers and for psychologists who deal with the management of stress as well as graduate students
