Commodity and Securities Exchanges ,2008 Special edition of the Federal register containing a codification of documents of general applicability and future effect as of April 1 with ancillaries *Foreign Exposure to Asset-backed Securities of U.S. Origin* Daniel O. Beltran,2008 The financial turmoil which began in August 2007 originated in part because investors reassessed the quality of the assets underlying many asset backed securities ABS particularly U S mortgages The prominence of European banks in the early stages of the turmoil created the perception that foreigners held an outsized share of risky U S securities and prompted questions of why Europeans were so exposed This paper evaluates that perception by quantifying foreign exposure to ABS with U S underlying collateral Using the latest survey data on foreign portfolio holdings of U S

securities we find that the ultimate losses that foreigners could incur arising from U S underlying assets are small relative to most scale variables although initial total mark to market losses are estimated to be significantly larger Among other reasons for this difference between ultimate and initial losses we demonstrate that the securitization chain can amplify mark to market price declines in the presence of uncertainty or illiquidity Finally we show that relative to the size of the market foreigners holdings of U S mortgage backed securities do not appear to be elevated compared with their holdings of other U S assets Federal Reserve Board web site
