Abo Incompatible Kidney Transplantation:

ABO-incompatible Kidney Transplantation Kōta Takahashi, 2001 ABO incompatible kidney transplantation is indicated for patients for whom no ABO identical or minor mismatch donor is available Since the author and his colleagues performed the first ABO incompatible kidney transplantation in Japan in 1989 400 such transplantations have been performed in 41 hospitals in Japan and this practice has contributed to a number of new developments One is a clearer and more suitable model for conceptualising the mechanism of humoral immune response which enables identification of antigens and antibodies and a therapeutic strategy against rejection The rejection mechanisms are discussed not only from the perspective of immunology but also viewed from different angles including anatomy microscopic and macroscopic pathology molecular biology and haematology Immunosuppressive therapy is discussed divided in four categories extracorporeal immunomodulation with removal of humoral antibodies drug therapy to suppress cellular immunity splenectomy and anticoagulation therapy Surgical procedures for kidney transplantation and splenectomy are treated including discussion of the best timing for the latter The book gives an overview of the current status with statistics and results of questionnaires and ends with discussions of 17 case histories

Accommodation in ABO-incompatible Kidney Transplantation Kota Takahashi, 2004 For most people today ABO incompatible kidney transplantation still carries the image of pronounced hyperacute rejection However with modern immunosuppressive therapy hyperacute rejection will not occur within the first 24 hours Clinical statistics in Japan show 3 cases of hyperacute rejection but all of these occurred because the recipient was mistakenly transfused during surgery with frozen plasma of the same blood type Delayed hyperacute rejection occurring after the first 24 hours is most likely to develop within 1 week post transplant It does not manifest suddenly but several years after transplantation This means that humoral rejection ceases to occur after accommodation has been established The use of evidence based medicine to correct misconceptions in this area has proven to be meaningful The publication of these data has made it possible to break down fixed thinking and prejudices previously regarded as fact in relation to ABO incompatible kidney transplantation It is believed that this will prove to be a major contribution in the future development of immunology As these data are provided as a common resource for physicians performing transplantation procedures it has encouraged more widespread implementation of organ transplantation

ABO-incompatible Organ Transplantation Yi Wang, 2019-02-18 This book introduces the clinical application of ABO incompatible transplantation In the first part it starts with the history blood group antigen antibody associated with ABO blood type pathophysiology and pathology and related knowledge In the second part it covers clinical experience sharing of ABO incompatible of heart liver lung and kidney transplantation It provides a systematic methodologies and protocols

Factors Affecting Graft Survival After Renal Transplant: Prevention of Failure and Follow up Strategies Laila-Yasmin Mani,Sing-Chung Li,2025-03-05 Renal transplantation considerably increases patient life expectancy and quality of life compared to dialysis it is regarded as the gold therapeutic strategy for patients with end stage renal disease In addition to the survival rate in transplant patients allograft failure is a significant source of worry since graft loss raises mortality and can add pressure to a community healthcare system Age race gender and immunologic compatibility of the recipient and donor are preoperative variables that affect function of graft and its survival Additionally a number of post operative factors including post operative immunosuppressive therapy and the duration of cold and warm ischemia have an impact on graft function and rejection However in contrast to short term survival rates long term graft survival has not met recovery expectations despite successful kidney transplant surgery But following transplantation post transplant patients typically experience post transplant cardiovascular and cardiovascular related mortality

Balancing Alloantigen-Induced Immune Responses and Anti-tumor Immunity in Transplantation Rita Maccario,Luigi Nespoli, Marcello Maestri,2025-09-12 Transplantation encompassing both hematopoietic stem cell and solid organ transplants is a critical medical intervention for treating various life threatening conditions However it is often complicated by alloantigen induced immune activation a response triggered by the donor s immune system against recipient antigens and or the recipient s immune system against donor antigens This immune activation can arise from prior sensitization events such as blood transfusions previous transplants or fetal maternal interactions While alloantigen induced immune responses can be beneficial as seen in the Graft vs Leukemia GvL or Graft vs Tumor GvT effects they can also lead to adverse outcomes like Graft vs Host Disease GvHD and graft rejection Several studies have highlighted the complex interactions between immune cell populations in these processes emphasizing the need for therapeutic strategies that balance long term donor recipient tolerance with the preservation of anti tumor immunity and protection against opportunistic infections Despite advancements there remains a significant gap in understanding the molecular and cellular dynamics of alloantigen induced immune activation necessitating further research to develop more effective and tailored therapeutic approaches This research topic aims to explore and delineate both molecular and cell based therapeutic strategies designed to control the adverse effects of alloantigen specific immune responses while

maintaining anti tumor immunity and protection against opportunistic infections in transplant recipients It encompasses a critical review of existing therapeutic modalities evaluates the latest advancements and highlights ongoing research focused on refining these strategies The objective is to foster a comprehensive understanding of the immune mechanisms at play and to identify innovative approaches that can enhance transplant outcomes

Biomarkers in Kidney Transplantation Dr Smita Pattanaik, Dr Ashish Sharma, 2025-10-17 Biomarkers in Kidney Transplantation Clinical Aspects and Laboratory Determination provides a focused study on traditional and emerging biomarkers to predict early rejection of kidney transplants supporting appropriate therapeutic interventions Coverage includes predictive and diagnostic biomarkers for different types of rejections including biomarkers of acute chronic sub chronic rejection or clinical rejection T cell mediated rejection antibody mediated rejection and mixed rejection Comparisons are provided for broad classification of pharmacokinetic versus pharmacodynamic biomarkers and differentiation is shown between the susceptibility diagnostic predictive prognostic and monitoring biomarkers Coverage of the analytical aspects of biomarker measurement the process of biomarker discovery and their clinical validation addresses both the clinical features of biomarkers as well as the pitfalls of determining such biomarkers in clinical laboratories By combining all current markers known for kidney transplant in one collection this easy to use reference is perfect for pathologists clinical pharmacologists clinical laboratory scientists and all physicians involved in organ transplantation including immunologists and transplant surgeons Includes comprehensive coverage on all available biomarkers to predict organ rejection Provides guidance on how to interpret test results of all available biomarkers Covers possible sources of errors in measuring biomarkers to eliminate issues of interference

ABO-incompatible Organ Transplantation from Japan Nihon Ishoku Gakkai. Meeting, 2006. Following the great success of Accommodation in ABO incompatible Kidney Transplantation published in September 2004, Elsevier is proud to present the publication of ABO incompatible Organ Transplantation from Japan, also edited by Professor Kota Takahashi. This new publication consists of a collection of invited papers from the International Meeting at the 41st Annual Meeting of the Japan Society for Transplantation held in Niigata on 29 October 2005. Since the donation of cadaver organs is extremely rare in Japan, ironically ABO incompatible transplants and partial liver transplants from living donors have become prevalent as a way of expanding the accommodation of transplants. More than 700 ABO incompatible kidney transplants and over 300 ABO incompatible liver transplants have been performed in Japan and the results improve yearly.

ABO-Incompatible Kidney Transplantation Masayuki Tasaki, 2016. Previously ABO incompatible kidney transplantation (KTx) was believed to be a taboo for immunological reasons. In Japan, the Tokyo Women's Medical University reported the first successful case of such transplantation performed on January 19, 1989. Since then we have been striving to improve the outcome of ABO incompatible transplantation for a quarter of a century.

ABO-Incompatible Kidney Transplantation Kota Takahashi, 2008-07-01. ABO-Incompatible Kidney Transplantation, Chapter 12 Masayuki Tasaki, 2016. Previously ABO incompatible kidney transplantation (KTx) was believed to be a taboo for immunological reasons. In Japan, the Tokyo Women's Medical University reported the first successful case of such transplantation performed on January 19, 1989. Since then we have been striving to improve the outcome of ABO incompatible transplantation for a quarter of a century.

Humoral Immunity in Kidney Transplantation Giuseppe Remuzzi, Stefano Chiaramonte, N. Perico, C. Ronco, 2009. As recent advances in immunosuppression and apheresis techniques have opened new avenues for the management of humoral immunity, interest in ABO incompatible kidney transplantation has been renewed. Moreover, new screening techniques such as the single antigen bead assay allow for the detection and

definition of very low levels of alloantibody which has had a positive impact on the treatment possibilities in highly sensitized adult patients with end stage renal disease But despite these advances a theoretical rationale is still missing for both the decision to transplant a sensitized patient and the classification of the transplant as low medium or high risk There is also no uniform approach with regard to pre transplant desensitization protocols and it is unclear whether particular post transplant immunosuppression will be required and what would be the best combination treatment Last but not least the frequency and actual clinical impact of alloantibodies developed after transplantation on short and long term graft survival need to be ascertained Aimed especially at the clinician this publication presents recent insights in the characterization and pathogenetic role of humoral immunity in chronic allograft injury and investigates the perspectives for novel immunosuppressive therapies to control antibody production after transplantation
