Building Aerodynamics:

Building Aerodynamics Tom Lawson, 2001-04-16 This book starts by explaining briefly the origins of wind It then proceeds to the normal forms of presentation for wind data and explains how each is used in the appropriate analysis The general aerodynamics of bluff bodies is explained in Chapter 2 Wind loading wind environment rain ventilation fire and effluent from chimneys are considered in the following chapters Experimental methods are discussed in the penultimate chapter Up to this point theory and practice are discussed and no design data are presented Necessary statistics insofar as they concern the earlier chapter material are presented in the last chapter This is not a theoretical study but simply pointing the reader to the appropriate statistical technique and presents the relevant expressions *Building Aerodynamics*, 1983

Building Aerodynamics, 1978 Research in Building Physics and Building Engineering Paul Fazio, Hua Ge, Jiwu Rao, Guylaine Desmarais, 2020-11-25 Buildings influence people They account for one third of energy consumption across the globe and represent an annual capital expenditure of 7% 10% of GNP in industrialized countries Their lifetime operation costs can exceed capital investment Building Engineering aims to make buildings more efficient safe and economical One branch of this discipline Building Physics Science has gained prominence with a heightened awareness of such phenomena as sick buildings the energy crisis and sustainability and considering the performance of buildings in terms of climatic loads and indoor conditions The book reflects the advanced level and high quality of research which Building Engineering and Building Physics Science in particular have reached at the beginning of the twenty first century It will be a valuable resource to engineers architects building scientists consultants on the building envelope researchers and graduate students

Computational Fluid Dynamics and Energy Modelling in Buildings Parham A. Mirzaei, 2023-01-24 COMPUTATIONAL FLUID DYNAMICS AND ENERGY MODELLING IN BUILDINGS A Comprehensive Overview of the Fundamentals of Heat and Mass Transport Simulation and Energy Performance in Buildings In the first part of Computational Fluid Dynamics and Energy Modelling in Buildings Fundamentals and Applications the author explains the fundamentals of fluid mechanics thermodynamics and heat transfer with a specific focus on their application in buildings This background knowledge sets the scene to further model heat and mass transport in buildings with explanations of commonly applied simplifications and assumptions In the second part the author elaborates how the fundamentals explained in part 1 can be used to model energy flow in buildings which is the basis of all commercial and educational building energy simulation tools An innovative illustrative nodal network concept is introduced to help readers comprehend the basics of conservation laws in buildings The application of numerical techniques to form dynamic simulation tools are then introduced In general understanding these techniques will help readers to identify and justify their choices when working with building energy simulation tools rather than using default settings Detailed airflow information in buildings cannot be obtained in building energy simulation techniques Therefore part three is focused on introducing computational fluid dynamics CFD as a

detailed modelling technique for airflow in buildings This part starts with an introduction to the fundamentals of the finite volume method used to solve the governing fluid equations and the related challenges and considerations are discussed The last chapter of this part covers the solutions to some practical problems of airflow within and around buildings The key aspect of Computational Fluid Dynamics and Energy Modelling in Buildings Fundamentals and Applications is that it is tailored for audiences without extensive past experience of numerical methods Undergraduate or graduate students in architecture urban planning geography architectural engineering and other engineering fields along with building performance and simulation professionals can use this book to gain additional clarity on the topics of building energy simulation and computational fluid dynamics

Wind Effects on Buildings and Design of Wind-Sensitive Structures Ted Stathopoulos, Charalambos C. Baniotopoulos, 2007-12-31 Written by seven internationally known experts the articles in this book present the fundamentals and practical applications of contemporary wind engineering It covers complex problems in wind building interaction from the perspective of a structural designer examining both experimental and computational approaches and their relative merits

Wind-Driven Ventilation Yves Earhart, 2025-02-23 Wind Driven Ventilation explores how harnessing natural airflow can create sustainable indoor environments offering an alternative to traditional mechanical systems It emphasizes the physics of wind behavior around buildings and its application to ventilation strategies crucial for reducing energy consumption and improving air quality For instance strategic window placement building orientation and understanding local climate conditions are vital for optimizing natural ventilation The book uniquely combines theoretical principles with real world applications using climate studies wind tunnel experiments and case studies It delves into topics like the stack effect cross ventilation and single sided ventilation

explaining each s strengths and weaknesses By integrating climatology building science and urban planning it underscores the importance of wind driven ventilation in creating sustainable buildings The book progresses by first introducing the fundamentals of wind behavior and then examining the design of wind driven ventilation systems It concludes by discussing the challenges and opportunities including strategies for diverse climates This approach provides designers engineers and policymakers with the tools to implement effective natural ventilation contributing to climate change mitigation and resilient communities
