American Building Art ,1960 **American Building** Carl W. Condit,1961 **Building the Nineteenth Century** Tom Frank Peters,1996 The Sayn Foundry in Bendorf a German town on the Rhine near the Dutch border is a fascinating example of complex technological thinking Although the structural detailing is typical of its period 1830 Prussian engineer and iron founder Karl Ludwig Althaus used and varied the many architectural and engineering models at hand in a sophisticated and complex building with structural elements that can be read as advertisements machine parts religious forms or simply as building elements The foundry which is still standing is just one of the many projects Peters examines in this broad synthesis of nineteenth century technological thought and methods of design that form the basis of the modern built world Through such examples he traces the growth of technological thinking as one of our culture s chief modes of thought and establishes its primacy over other forms such as scientific or humanistic thinking as the major component of building design

American Building Art Carl W. Condit,2003-01-01 Experiencing Architecture in the Nineteenth Century Edward Gillin,H. Horatio Joyce,2018-10-18 Bringing together fourteen original essays this collection opens up new perspectives on the architectural history of the nineteenth century by examining the buildings of the period through the lens of experience With a focus on the experience of the ordinary building user rather than simply on the intentions of the designer the book shows that new and important insights can be brought to our understanding of Victorian architecture The chapters present a range of ideas and new research some examining individual building case studies from grand hotels and clubhouses in New York to the parliament buildings of Westminster and others exploring conceptual questions about the nature of architectural experience whether sensory or otherwise Yet they share the premise that the idea of the experience of architecture took on a new and particular significance with the rise of industrial modernity and they examine what contemporary people both architects and non architects understood by this idea The insights in this volume extend beyond the study of Victorian architecture Together they suggest how experience might be used as a framework to produce a more convincingly historical account of the artefacts of architectural history **The Principles of Planning Buildings** Percy Leman Marks,1911
